The goal of this paper is to shed light on an under-described variety of Domari, a very scarcely documented Indo-Aryan language spoken by the Dôm, who are often referred to as “the Middle-Eastern Gypsies”. Described as an archaic Indo-Aryan language, Domari is known to the scholarly community from a limited number of word lists dating back to the 19th century and two partial descriptions based on a rather moribund dialect, the one spoken in Jerusalem. Apart from these sources, no reliable data are available about other varieties. The data presented in this paper come from an original field-work carried out in 2009 and 2010 amongst the Dôm community in the city of Aleppo in Northern Syria and are an important contribution to our knowledge of one of the very few old diasporic Indic languages spoken outside the Indian subcontinent.

Introduction

Domari is an Indic language spoken by the Dôm, commonly described as the “Gypsies” of the Middle-East. The Dôm are originally service-providing itinerant communities who left India at an early stage and spread across the Middle-East. The term Dôm is itself cognate with the Indian caste name Dõm\(^1\) which is still widely used in India to designate a variety of peripatetic communities.\(^2\) Amongst the Indic languages spoken outside the Indian subcontinent, the most well-known and studied is Romani, the language of the European Roma. The Lom, located in Armenia and also in parts of Eastern Turkey, also spoke a fully-fledged Indic language but it has only survived as a lexicon within an Armenian matrix (Voskanian 2002). Domaaki and Parya are also diasporic Indic languages spoken outside or at the periphery of India but they remained typologically closer to Central Indo-Aryan languages.\(^3\) Although the historical links between Romani and Domari are still to a large extent obscure, it is now accepted that they are not sister-languages or even dialects of the same language.\(^4\)

---

\(^1\)The underdot symbol in Indian studies refers to retroflex consonants, commonly found in languages of the Indian subcontinent, whereas in Arabic studies, it refers to velarised consonants. All the Indo-Aryan roots are taken from Turner (1962-1966).

\(^2\)See Benišek 2009 for an historical account of the term doma/domba- in India. According to him, “it should be pointed out that the present-day doms do not represent a single caste or a homogenous group. In fact, the modern reflexes of the word doma- seem rather to be cover terms for a number of castes which may share certain features, such as being "low caste" and having a similar socio-cultural and economic profile. However, various dom groups in different parts of India may not share a common origin.” (Benišek 2009:349).

\(^3\)They both retained to various degrees a partial ergative alignment, common in Indo-Aryan languages spoken in the Indian subcontinent, while Domari and Romani are both strictly accusative. For a recent account of Domaaki, see Weinreich (1999 & 2008). For Parya, see Oranskij (1977) and also Payne (1997).

\(^4\)Matras sums up the situation saying that “The linguistic affinity between Romani and Domari (and, as far as documented, Lomavren) might therefore be accounted for in terms of their shared ancient origin and subsequent similar social and geographical history, rather than as a token of continuous genetic ties in the form of a linguistic sub-branch within the Indo-Aryan languages.” (Matras 2002:48).
Very little is known about the history of the Döm and much of what is stated about them relies on linguistic evidence. The language is known to be spoken in Palestine, Jordan, Lebanon, Syria, Turkey and probably also Iraq and Iran, although there is no direct evidence that Domari is still spoken in these last two countries (see below). The so-called Gypsies of Egypt (gaşār in Modern Standard Arabic) and the  Hạlab of Sudan both speak Arabic but kept a secret lexicon, partly based on Domari (Matras 2006). There are very few reliable figures about the number of Döm, let alone the number of speakers. According to Matras (Matras 1999:4), the Jerusalem community does not exceed 600-700. Other figures are given by Meyer for Damascus about which he says that “In Sayyida Zaineb, the largest Döm settlement, their number lies between 4000 and 10000” (Meyer 2004:76). The other Döm population for which I was given estimations is that of the Diyarbakir province in eastern Turkey where their number is believed to be 14000, of which 3000 are in the city of Diyarbakir itself (Adrian Marsh, p.c.). The Döm community of Aleppo is probably one of the biggest in Syria and it is very plausible that their number exceeds a couple of thousand. In Syria, apart from Damascus and Aleppo, other groups are reported mainly in Ḥoms and Latakia.

The Döm are highly marginalised in the Syrian society and stereotypes associated with them are many. In Syria, they are referred to as Qurbāt (‘arbāt in the dialect of Aleppo) or Qarač in the northern part of the country and Nawar elsewhere. The term Nawar, plural of Nūrī, is also widely used in other parts of the Levant. These terms refer to various populations who mainly share a socio-economic profile. According to Meyer (2004:72), these groups used to adapt their migrations to the calendar of rural, nomadic and urban communities and according to this, fit quite well into the definition of peripatetic peoples. In Aleppo, the main (claimed) occupations are sieve-making, rudimentary dentistry and dancing (the so-called hağgiyyāt “female dancer” performing in the maqāṣif, plural of maqṣaf “cabaret”). In Syria, other occupations generally attributed to the Döm are iron work, jewellery and the production of coffee mortars, while Döm women focus on tattooing, fortune telling and begging (Meyer 2004:73). Every individual belongs to a clan or family. These are referred to as ʿašīre (PL. ʿašāyīr), a term mainly used in the context of Arabic traditional nomadic or rural life. Some of the names recorded are nāṣīllārin,7 barḡölīyīn, qādāllārin,8 malḥāmin, zētqayyīn and also qurbāt iṣ-ṣām (literally “Döm of Damascus”). The zētqayyīn are also called by the Arabic name akkālīn zēt “oil eaters”. The

---

5I have witnessed myself communities in the province of Iskenderun, which now belongs to Turkey but used to be part of Syria until 1939. This was also confirmed by a Döm informant I recorded in Beirut (Lebanon) in July 2011, originally from Sarāiqib, in the governorate of Idlib (a Syrian region in the immediate vicinity of Iskenderun).

6Also according to Meyer (2004:74), the various groups covered by the term Nawar are the Döm, Turkmen (Sunni and Shia), Abtal, Alban, Akrad and Kaoli. He reports that the Turkmens and the Abtal speak Turkish, the Akrad speak Kurdish, the Alban speak “Quarnaqut [sic!]” (hypercorrection for Albanian, ʿarnaʿut Jérôme Lentin, p.c.) and the Kaoli speak a Persian dialect. As for the language of the Döm, he writes “Domānī”, a term I never came across. While the Turkmen probably speak a Turkic language, more in-depth fieldwork is needed to make any decisive statement about the languages spoken by these groups.

7The clan name nāṣīllārin obviously comes from Arabic Nāṣīr (Arabic proper noun) + lar (Turkish plural suffix) + -īn (Domari plural marker). Quite normally, /l/ assimilates to /l/, resulting in gemination of /ll/. An interesting feature is also the velarisation /l/: /ll/.

8Same as above: qādir-lar-īn
näṣūlārin and qādūlārin are also referred to by their Arabic name nawāṣra and qawādra, applying the pattern CaCāCCA traditionally used in Arabic to designate clans or groups.

The language spoken by the Dôm is traditionally called Domari amongst the scholarly community. The name appears for the first time in a series of articles published by Macalister in the early 20th century in which he describes the variety spoken in Palestine (Macalister 1914) and has since been used indifferently by scholars (Matras 1999:4). The Dôm of Aleppo do not call their language domari, but dömvārī (expectedly stressed on the last syllable), which may occur in collocation with ġīb “language”: dömvārī ġīb “Domari language”. An attractive etymology for dömvārī is the suffixation of the Old Indo-Aryan root *vari “speech, language”10 to the ethnonym Dôm. Dömvārī would thus originally mean “speech of the Dôm”. However, this morpheme does not seem to be productive anymore in Domari, although more research is needed to confirm this claim. It would then remain to be explained why two morphemes with the same meaning co-occur: vari and ġīb. A possible account is that the two formatives döm and vari lexicalised, and that the suffix vari lost any productivity, allowing the new lexeme to occur in collocation with ġīb. The formative vari is also found in Turkish where it appears as a derivational suffix that attaches to nouns to derive adjectives.11 Göksel & Kerslake (2005:62) notes that this suffix of Persian origin tends to fall out of use. Since derivational suffixes are easily borrowed, it may simply have been copied from Turkish or a variety of Iranian with which Domari was in contact. It is still unclear where the term “Domari” comes from but a possible explanation is that what Macalister heard was not dömvārī but dömvārī. The approximant [v] is specific to the dialect of Aleppo and data available from other dialects indicate that this phoneme is usually realised [w]. The proximity of [m] and [w] may lead to assimilation or the elision of either [m] or [w], making it sound like döwārī ~ dömārī. Strangely enough though, Macalister transcribes it dömvārī in his lexicon, suggesting that the word is stressed on the second syllable, whereas dömvārī is clearly stressed on the last syllable. For the sake of clarity and whatever the truth is, the term Domari is now well established and will be maintained in the present work.

Data about Domari are extremely scarce. The only variety that has been properly investigated is the one spoken in Jerusalem. Until recently, the main source of much of what had been written about Domari was Macalister’s description first published in a series of articles in the Journal of the Gypsy Lore Society at the beginning of the 20th century and subsequently compiled in a single volume (Macalister 1914). Since Macalister, the only scholar who carried out original fieldwork is Yaron Matras (1999). He investigated the same community that was the object of Macalister’s study. Other available material dates back from the 19th century and consists mainly of word lists. Chronologically, the first article of interest is Pott (1846) in which he discusses data collected in the vicinity of Beirut. Overall, Aleppo Domari seems closer to this dialect than to Palestinian Domari.12 Newbold’s article (Newbold 1856) entitled “The Gypsies of Egypt”

---

9 As far as I know, the name first appears in Arabic in Al-Jībāwī (2006:13) as ضَم وَارِي, which can be transliterated dömvārī.
11 Göksel & Kerslake (2005:62) provides only two examples: gangstervari “gangsterlike” and Amerikanvari “American-like”.
12 Amongst the lexical items from Pott I couldn’t find traces of in Palestinian Domari, one finds chaghâ “boy” (Aleppo ġāgā) or Ĭch “foot” (Aleppo qīč). This last item is interesting as it suggests that the Domari dialect of Beirut
presented material collected in northern Syria, more specifically in Aleppo and Antioch, and also in Iraq. \(^{13}\) Worth of interest is also Paspatti’s work (Paspatti 1873) whose primary focus was the Romani dialects spoken in the European parts of the Ottoman Empire and in which he also discusses data from Domari probably collected in Eastern Anatolia. Most of the examples and the lexical items he gives are also to be found in the contemporary dialect of Aleppo. \(^{14}\) The short article of Francis Groome (1891) presents data collected in Iran and in Damascus. The Iranian word list apparently originates from Tabriz and is a reprint from William Ouseley (1823) who was traveling in the region in 1812. The language is obviously Domari and this is clear evidence that it was once spoken in what is now Iran. The Damascene word-list seems to have been collected a couple of years earlier, around 1881. Although the transcription of the Damascene data seems rather erratic, the language is quite close to what I recorded in Aleppo. \(^{15}\) Another source is Patkannoff’s article in which he gives words of what he calls “the dialects of the Transcaucasian Gypsies” (Patkannoff 1907/1908). \(^{16}\) Macalister’s description (Macalister 1914) is the first attempt to document the essentials of Domari grammar as spoken in Palestine. He based his work on a single speaker whom he asked to translate into Domari Arabic sentences and texts. This methodology in modern descriptive linguistics would probably be cautioned against but he nevertheless managed to collect a significant lexicon and to provide a rather accurate grammatical sketch of Palestinian Domari. Matras’ study (Matras 1999) is a follow-up of Macalister’s and documents the language as it is used now, supplementing what had passed unnoticed or not fully understood by Macalister. The overall picture is a rather moribund language, deeply influenced by Arabic. Matras estimates that only twenty per cent of the Dôm population in Jerusalem maintained an active use of Domari in their household, mostly elders had already undergone the phonetic change attested in the contemporary dialect but also in urban Arabic dialects of the Levant and cross-linguistically, that is the passage from uvular [q] to laryngeal [ʔ]: Aleppo qāyiš “food” vs Beirut iyiš. As far as grammatical material is concerned, one reads sā “all” (Aleppo sāj, amin “we” (Aleppo amin), atmin “you PL.” (Aleppo tmin). This is also striking with interrogatives: keki “what” (Aleppo kakki “which”), kū “who” (Aleppo kūd, keita “where” (Aleppo kēta), ksei “why” (Aleppo kēsē). The same goes for the copula and the imperfect marker -a: keita stûra “where were you” (Aleppo kēta štôraši). 

\(^{13}\) It consists mainly of a list of lexical items. Most of them are also found in Aleppo Domari. An interesting feature is the western Iranian preposition z- “from” that appears in some sentences (Newbold 1856: 312): ma z’Antuki einroom “I came from Antioch”. This preposition is still in use today.

\(^{14}\) Paspatti calls the Dôm “Tchingianês asiatiques”. He also gives items in what he calls the language of the “Tchingianês de Tokat”. A closer look is needed to confirm whether this is a form of Lomavren.

\(^{15}\) An interesting feature is the extent of fusion with Arabic. The Aleppo variety also draws heavily on Arabic but one can see things that usually do not appear in Aleppo like the Arabic preposition min “from”: minzaytta “from here” (Aleppo zēta). Also striking is the co-occurrence of Arabic min and Iranian z- in Damascus. The same remark goes for the Arabic conjunction wa- “and” that made its way into Damascene Domari: heyta wa horta “here and there”. This never appears in Aleppo where la- is used, together with Kurdish =şī. Matras (1999:2, 27) considers these items to originate from Beirut. The problem may arise from the ambiguity of Groome (1891:25) who writes that this list was sent to him “by Miss G. G. Everest of Beyrout, who had got it from a friend at Damascus”.

\(^{16}\) The sentences he gives in the “Karači dialect” (Patkannoff 1907/1908: 260-264), although some words can be recognised, are extremely puzzling. My opinion is that this language could hardly be called Domari and should be considered another idiom. A striking syntactical difference between Domari and the language documented by Patkannoff is the possessive pronouns. In Patkannoff’s material, these may appear as free morphemes placed pre-nominally: ame dikom teri latefihi “we saw your daughter”. The words in this sentence are easily identifiable: ame “we” (as in Palestinian Domari), dikom “we saw” (Aleppo Domari dak- ~ lak- “see, find”), teri “your” (Aleppo Domari tar- the oblique form of tū “you”) and latefihi “daughter” (Aleppo Domari lâfti “girl”).

Linguistic Discovery 10.2:1-52
(Matras 1999:4). The question of language maintenance in other communities is rather tricky. When asked if people usually spoke Domari to their children, my informants generally answered positively. I also witnessed mothers addressing their children in Domari. I also recorded an eight year old boy who seemed fully competent in Domari. It would then seem that the dialect of Aleppo is in a good shape, although a more in-depth sociolinguistic study would be needed in order to assess the level of endangerment of the language. According to this, it seems that any general statement about language maintenance amongst Döm communities is simply impossible and premature, as situations seem to vary greatly from one location to another. As far as multilingualism is concerned, all the Döm in Aleppo are proficient in Arabic. It should be added as well that the neighbourhood I worked in (Aşraftıyye) is populated by Döm and Kurds and that Kurdish is still a contact language of Aleppo Domari.

Apart from the variety spoken in Palestine, which is on the verge of extinction, and the few sources dating back to the 19th century, virtually nothing is known about other varieties of Domari. The present work aims at filling this gap by documenting some structures of an undescribed dialect of Domari, that of Aleppo. This is by no means an exhaustive study and only a couple of features will be discussed here. A more lengthy and comprehensive fieldwork will be needed to provide a more thorough description. A first series of recordings with two speakers—a man and a woman in their early thirties—was made in the summer 2009 that consisted mainly of some lexical items and paradigms. I was able to go back to Aleppo in summer 2010 where I recorded more speakers, a man in his fifties and his son, and two other young men in their twenties. Most of the time was devoted to filling in a linguistic questionnaire developed by Yaron Matras and Viktor Elšík and initially designed for Romani dialects (Matras & Elšík 2001). I was also able to record short excerpts of spontaneous speech. All the recordings were transcribed and analysed. What follows is the outcome of this analysis. Due to the rather small size of the corpus, everything that is stated here should be considered provisional until more in-depth fieldwork is done.

1. Sound System

1.1 Vowels

Although more data is needed in order to establish the phonological system of Domari on the basis of minimal pairs, phonemic contrast seems to be available only between long vowels. These are /aː/, /oː/, /iː/, /uː/, /ɛ/ and /ɔ/. In plain context, the main allophones of these long vowels are respectively [æː] (papür [paːˈpɪr] “grand-father”), [ɐː] pásom [paːˈsom] “at me, at my place”, [iː] psik [psık] “cat”, [uː] kükär [kuˈkær] “cock”, [ɛː] čezık [ʧeˈzık] “child”, [ɔː] ošt [oʃt] “lip”. The vowel /ɛ/, although the main realisation is [eː], was also recorded [ɛː] in items like [kstː] (~[kstː]) “why” and [kɾtː] (~[kɾtː]) “where”. In final position, a nasalised reflex of /ʊ/ appears:

17They mostly speak the dialect of Aleppo. One of my informants had also features traceable to Iraqi Arabic. I was also struck by the fact that most of them kept the uvular realisation of /q/, whereas in the dialect of Aleppo etymological /q/ is mostly realised as a glottal stop. The [q] reflex is however kept in some villages around Aleppo.

18I am grateful to Yaron Matras for sending me an electronic version of the questionnaire. It can also be found online at romani.humanities.manchester.ac.uk/rms/browse/phrases/phraselist.
totā [təˈtː] “he gave”, laurā [ləˈurːə] “tree”, drōngā [dronˈɡː] “long, big”. This may be a pausal phenomenon. This is further suggested by the behaviour of the morpheme sā “all”, clearly realised with nasalisation when followed by a pause: čāgēm sā [tʃæːyːm sː] “all my kids”; but otherwise realised [ʃː] when other morphological material is suffixed: sā-ē-mā [saːmæː] “all of us”. As far as short vowels are concerned, one finds a great deal of variability and a strong tendency to centralisation towards [ə] is observed, especially in rapid speech. This parallels what usually happens in sedentary Northern Levantine Arabic dialects in which phonemic contrast between the three inherited short vowels /a/, /i/ and /u/ tends to be reduced to /a/ and /ə/ (or /u/ and /ə/). Such a loss of phonemic contrast between short vowels is also suggested by the tendency to elision in unstressed positions: ahlōm kərī ~ ahlōm kərī “the house of my family”, čərī ~ čərī “knife”, māmōm qaɾ “my cousin (the son of my uncle)” but qaɾ-ōm “my son”. One may posit a symmetrical system of long and short vowels and recognise the following inventory of short vowels: /a/, /i/, /u/ and /ə/. However, due to centralisation, the following realisations are most often encountered: [ə], [i], [u] and [e]. This is further exemplified when comparing some of the items given by Matras (1999:9) in I.P.A.: Jerusalem [məɾːəs] “person” vs. Aleppo [məɾːəs] “husband”, Jerusalem [lakədəm, laka'dom, lake'dom] “I saw” vs. Aleppo [lakəɾ'dom ~ dakərdom] “I saw ~ I found”. The vowel [i] was mostly recorded in final stressed closed syllables: kō wāt-əs [ko: wawːis] “throw the stone”, šīṭāl čēsk-əs [ʃtæːl ɾʃæːk'ʃiʃ] “lift the boy!”; and also in loans from Turkish: yēldəz [jeːl'diz] “star” (< Turkish yıldız “star”). Central rounded realisations were also recorded in kərī [kəɾi] “house”, xəɾgā [xəɾɡːɑː] (~ [xəɾɡːɑ]) “yesterday”, gəltənī [ɡoldænːiː] “sweets”. It is however premature to assign these various allophones to their phonemes. As said above, more data is needed to fully describe the vowel system.

Table 1: Inventory of Consonants
The laryngeal /h/ in the inherited component is usually elided and surfaces only in (very) careful speech. It has been maintained systematically only in the demonstrative ḥā. Although only marginally, /h/ may undergo elision in material borrowed from Arabic. ḏammūма“1 understand” (< Arabic ḏamū “understand”). Otherwise, /h/ is normally maintained in Arabic and Kurdish items: dahn ~ dāhūn kar- “to paint”, har “each”, hazz “still”. The pharyngeals /ḥ/ and /ʕ/ are of course mainly found in items borrowed from Arabic, but also from Kurdish: ħawt ~ ḥāft “seven”, ḥaṣṭ “eight”, moʿōri “ant”. Interestingly, the pharyngeal /ʕ/ was also recorded in the word ārd “earth”. The word for “coffee” is borrowed from Arabic but appears with /ḥː/: qahwā “coffee” (< Arabic qahwā). The uvular /q̄/ is common in loanwords from Arabic, Kurdish or (varieties of) Turkish (gāši “door”, qārē “in front of”, qāšq “spoon”, qār “son”) and also in the inherited lexicon (qālā “black”, qāyīš “food”). The uvular /q̄/ was also recorded as [x] in wakt “when”, probably from Kurdish (initially from Arabic waqt “time”).19 This conjunction however was not recognised by all the informants. The voiceless velar /x/ is very common and appears in all layers of the language: takt “bed” (< colloquial Arabic takt, originally a loan from Persian), xaṣṭ “hand”, xōzzāme “I laugh”. The voiced velar /ɣ/ appears mainly in the Arabic component: gabre “dust”, ɣalat “wrong”, ɣēr “other”. It was also recorded in ēγā “child”, probably borrowed from Kurdish. In rapid speech, voiceless consonants may undergo voicing: mā-gazī “don’t laugh!” (< xaz- “to laugh”). The voiced postalveolar /ɣ/ is mainly realised as an affricate: ɣāftā “groom”, ɣāf “today”, ɣānšā “I know”. It may alternate with the fricative reflex [z] in some items like xaγā ~ xāzā “yesterday”, ġu ~ żu “go!”, lağı ~ laži kar- “to be ashamed”. The fricative also appears commonly in items borrowed from Arabic: sīzīn “prison”, mihtāż = ištāme “I need”. This, surprisingly, cannot be attributed to an influence from the Arabic dialect of Aleppo because in that variety, etymological /ɣ/ is mostly realised as an affricate. The voiceless affricate /ʃ/ is quite stable and no instances of de-affrication towards [ʃ] were recorded. In some cases, [ċ], [tʃ] and [t] seem to be in free variation, as in the following variants: lāfī ~ lāfī ~ lāfī “girl”. Such a variation is also possible in the subjunctive extension -eː-, pārčmān ~ pārčm “(that) I come back”, kā (h)ōčm ~ kā (h)ōč “I will be(come)”. It must be added however, that [č] and [tʃ] are not in free variation as speakers consistently use either one variant or the other. A peculiarity of the dialect of Aleppo is the cluster /st/ in the word xāṣt “hand” (Palestinian Domari xast). The velarised consonants /q̄l/, /h/ and /ʣ/ (the underdot symbol refers to velarisation, not retroflexion) are commonly found in items borrowed from Arabic: fāddal kar- “prefer” (Arabic fāddal “he preferred”, maṭbax-s-mā “in the kichen” (< Arabic maṭbax “kitchen”), tawlā “table” (< Arabic tawl “table”), zānn (h)ōme “I think” (< Arabic zann “he thought”). Velarised realisations were also recorded in the following items: pētā “belly” (< Indo-Aryan pēṭā “belly”), wāt “stone” (< Indo-Aryan varta “round stone”), ṭellā “fat” (< Indo-Aryan ṭhūlā). Peculiar to the dialect of Aleppo is the approximant /wː/; vāl “hair”, vāy “air”, wāy “city, market”, wā kar- “open”. The allophone [w] appears in the vicinity of back vowels: wāt [wːt] “stone”, kōwirōm “I fell”, kā ġīrāwūča “You will get married”, awāsār “summer”; and in loans from Arabic: sēwī “straight”, ūwīn kar- “help”, ḫwī kar- “bend”. This seems to suggest that one should distinguish between [w] as allophone of /w/ and /wː/ as a distinct phoneme. An interesting minimal pair to contrast /wː/ and /w/ appears in the following prepositions: bē “with

---

19The shift from /q̄/ to /x/ in waqt “time” is also attested in some dialects of Arabic (Jérôme Lentin, p.c.).

Linguistic Discovery 10.2:1-52
The Domari Language of Aleppo

1.3 Stress

Judging by the recorded data, stress assignment in Aleppo Domari is the same as in Palestinian Domari: it falls on the last syllable of the phonological word: *kandargi* “rabbit”, *kərvık* “worm”, *xərənək* “waist”. Stress on the first syllable was recorded in certain adverbs of time: *āgā* “today”, *sōbā* “tomorrow” and *xəgā* “yesterday”, although the last two items may also be stressed on the last syllable: *sobā* and *xəgā* (other possible forms are *xəg ~ xəgōti ~ xəgōtini* “yesterday” and *ağ ~ ağōti ~ ağōtini* “today”). When morphological material is suffixed to nominal roots, only Layer I case markers (accusative -ə, oblique -ə and accusative/oblique -ən, see below for a discussion of Layer I and II) and bound pronouns are part of the domain of stress: *kəmār* “firewood”+ -əs (accusative marker) → *kəmār-əs*, *bén* “sister” + -ər → *bən-ər* “your sister”. Layer II markers are never stressed: *ndə-ə* “on the road” (path-OBL-SUP). As far as bound pronouns are concerned, one observes that the formative /n/ used to mark the plural remains out of the domain of stress: *pən-ə-mən* “come to our place” (come AD.1PL). This may explain why the consonant /n/ is often simply elided: *mək* ġar pəs-ət-ə “let him go to your place” (let.IMP go.SUBJ.3SG at-1-PL). The copula can be stressed when it appears right after the lexical root: *hanā* grān=ə “this is heavy” (DEM heavy=COP). It remains outside the domain of stress when additional material is inserted between the root and the copula: *kərəy-ō-mən=ə* “it’s our house” (house-SG-1PL=COP). This seems to suggest that the maximum stress shift is one syllable to the right of the lexical root. This is further evidenced with verbal roots where the suffixion of morphological material triggers a stress shift of one syllable to the right: *tənəde* “they put” + -ə (3rd person singular object bound pronoun) → *tənəsē* “they put it”. An exception appears with verbs in the imperfective marked with the negation marker *n-* in which case stress falls on the last syllable of the verbal word: *n-əgān-mə-sən-ɛ* “I don’t know them” (NEG-know.IMPFV-SUBJ.1SG-OBJ.3PL-CM), *n-mangışt-ər-s-ɛ* “you don’t want it” (NEG-want.PROG-SUBJ.2SG-OBJ.3SG-CM, see below for a short discussion of negation strategies). Stress also falls on the so-called remoteness marker -əši (see below for a discussion of the marker -ə): *kərəy-ə-m=ɪʃtəre* (house-OBL-IN=COP.2SG) “you are home” vs. *kərəy-ə-m ə-n-iştər-əši* (house-OBL-IN NEG-COP.2SG-RM) “you were not home”. In the perfective, *n-* drags stress on the first syllable: *əyəm̥̃* “I came” vs. *nərəm̥̃* “I didn’t come”. Items borrowed from Arabic are integrated into the Domari stress pattern: *təwəl̥* “table” (< Arabic *țəwəl̥*), *kursiyyâ* “chair” (< Arabic *kursi*), *diwān̥iyā* “bench” (< Arabic *diwān̥iyê*). Unlike what is reported in Palestinian Domari (Matras 1999:14), even proper nouns are integrated into the Domari pattern: Arabic *hāsna* (female name) vs. Domari *həsna*. 

Linguistic Discovery 10.2.1-52
2. Morphology

2.1 Free pronouns

Domari has a set of free pronouns and another of bound pronouns.

<table>

</tbody>
</table>

Table 2: Free Pronouns

The 3.PL *pangyān, attested in Palestinian Domari (pandžan, see Matras 1999: 27) never appears in the corpus. However, it is very plausible that it exists and was simply not recorded. Although pāngi is well attested, third person is most often expressed by demonstratives used pronominally. The recorded forms for the singular are the following: han(ā) (proximal) and h(a)mū (distal). The singular forms ĕrīn ~ hanērīn were also recorded and may be competing distal forms. In the plural, the following forms were recorded: ĕrīn ~ hanērīn (proximal) and ŏrīn ~ hanōrīn (distal). More data are necessary in order to see whether these inflect for case and gender.

(1) a. hnū n-gāšte kāri
   that NEG-go.PROG.3SG house
   “(S)he doesn’t want to go home”

   b. ŏrīn kēlende tābānī
   those play.IMPFV.3PL foot-ball
   “They play foot-ball”

There is also a set of marked forms for the 1st and 2nd persons (Table 3)

Their use seems to be conditioned by topicalisation, as evidenced in (2).

(2) a. tēn vērōr čāḡ-ṃs
   2SG hit.PFV.2SG boy-ACC
   “You are the one who hit the boy”
The suffixation of Layer II case markers to free pronouns appears to be a marginal strategy in comparison with the attachment of bound pronouns to preposition-like formatives. This was however recorded with amā, tō, amīn and tmin: (a)mā-ki (me-ABL), amā-ka (me-AD), tēr-kī (you-ABL), tēr-kā (you-AD), amīn-ka (us-AD), tmin-ka (you.PL.-AD). What is striking is that only the 2nd person singular form tō shows allomorphic variation: tēr. More data is needed to see whether this is also possible with the 3rd person pronouns.20 The use of free pronouns augmented with Layer II markers was recorded after the prepositions qabl “before” (< Arabic qābl) and vē “without” (< Kurdish bē): qabəl tēr-ki “before you”, vē mā-ki “without me”. It appears also marginally in possessive clauses: tēr-kā ašti di trombilā “you have two cars” (you-AD there.is two car), amā-kā =šī ašti guštary-ā sōwən “I also have a golden ring” (me-AD=also there.is ring-INDEF gold).

2.2 Bound pronouns

The bound pronouns attach to nouns, verbs and a series of preposition-like morphemes.

</tbody>
</table>

Table 4: Bound Pronouns

When suffixed to singular nouns, the extension -ō- is inserted between the root and the pronoun: -ōm, -ōr, -ōs, -ōmā(n), -ōrā(n), -ōsā(n). In the plural, -ē- is selected: -ēm, -ēr, -ēs, -ēmā(n), -ērā(n), -ēsā(n). Consider the following examples:

(3)  hā kāry-ō-mān =e
     DEM house-SG-1PL=COP
     “This is our house”

20At one point, one of the informants uttered dōska, which may well turn out to be the demonstrative dōsə augmented with Layer I oblique case -r- and Layer II adessive marker -ka. or-s-ka “he has, at him”. This, however, needs explicit elicitation to be confirmed. Such an interpretation was also suggested by data elicited from a Domari speaker from Saraqib in northern Syria. Although his dialect was different from Aleppo Domari, one may expect these features to be shared by the two varieties. In Saraqib, singular accusative forms are ēr-rəs (proximate), dēr-rəs (distal). Singular oblique forms are ēr-ə- (proximate) and dēr-ə- (distal). The plural form is shared for both oblique and accusative: ēr-ən. This is totally predictable in the light of the Layer I case system of Aleppo Domari. It is therefore very likely that Aleppo Domari exhibits the same forms. Quite intriguing in Aleppo Domari is dōsə for both nominative singular and oblique/accusative plural. There is however no possible overlap as they appear in different syntactic positions.
The consonant /n/ of the plural forms most often drops, unless followed by a vowel, as in (3):

(5)  qaddāh-ō-sā  ētā = ye
     lighter-SG-3PL  here=COP
     “Their lighter is here”

With preposition-like morphemes, the bound pronouns are used: diš-ōm “from me”, vāš-ōm “with me” (also vāš-im), pāš-ōm “at me”, manɡ-ōm “in me”, (v)at-ōm “on me”. It was also recorded with the Arabic preposition dūn “without”: dūn-ōm “without me”. The allomorph of the 3rd person singular is not -ōs but -ī\(^{21}\) diš-ī “from him/her/it”, vāš-ī “with him/her/it”, pāšī “at him/her/it”, manɡ-ī “in him/her/it”, (v)at-ī “on him/her/it”. In the plural, the formative /ā(n)/ is simply added: dišyā(n) “from them”, vāšyā(n) “with them”, pāsyā(n) “at them”, mangyā(n) “in them”, (v)atyā(n) “on them”. The form *ab- carries a benefactive meaning: ab-ōm “for me”. Contrary to what may be expected, the suffixion of the 3rd singular pronoun gives ab-ōs “for him” and not *ab-ī. The form vēš- was also recorded in the sense of “from”: vēšōm “from me”, vēšīr “from you”, vēšī “from him”. These preposition-like morphemes are never used without bound pronouns so they are never used to modify a noun phrase, as case marking is the only possible strategy for that purpose. According to this, one way to look at things is to consider these preposition-like morphemes augmented with bound pronouns as allomorphs of free pronouns marked for case.

It is however still unclear what the exact difference may be between mā-ki (me-ABL) and dišōm both meaning “from me” or ter-ka (you-AD) and pāsōr both meaning “at you”. As suggested by the recorded tokens, it may well be that the marking of the pronouns by Layer II markers is restricted to marked contexts such as focalisation or topicalisation. Forms that have not been recorded so far are the pronouns marked for the versative case.

The bound pronouns are also used as object pronouns when suffixed to a verb: nērōs-ēm “he took me” (take.PFV.3SG-1SG), āwīn karm-ār “(that) I help you” (help.SUBJ.1SG-2SG), tōm-ās “I gave him” (give.PFV.1SG-3SG), ĕrīn ḥass karōnd-āmān-e “they love us” (them love.IMPVF.3PL-1PL-CM), kā pdēm-ārā “I want to give you” (FUT give.SUBJ.1SG-2PL-), lakārōnd-ām-sā “I saw them” (see.PFV.1SG-3PL).

2.3 Reciprocal

Aleppo Domari uses the numeral yēk “one” as reciprocal augmented with the plural suffix -ē- followed by a bound pronoun, as shown (6). An interesting form that was recorded involves the

\(^{21}\) It is most likely that this was originally -īs, in which /s/ dropped. This is also further evidenced by Macalister’s material (1914) in which one can read forms like wāšīs “with him”, ūnkīs “in it”, mnēšīs “from it”. One finds also wāšīs “with him” in Matras’ material (Matras 2000).
The Domari Language of Aleppo

numeral yeğ followed by the plural form of the oblique marker and the comitative: yeğ-an-sa “together” (one-OBL.PL-COM). This obviously parallels the Arabic phrase maʿ baḍd “together” (“with each other”).

(6)  
\[ \text{gā kardēn yeğ-ē-mā-tā} \]
\[ \text{say.PFV.1PL one-PL-1PL-SUP} \]
\[ “We said to each other” \]

2.4 Reflexive

Aleppo Domari makes use of the inherited root pā- in reflexive constructions. This is very similar to what is found in Romani whose reflexive pronoun is cognate with Domari pā- (< Old Indo-Aryan ātmān “breath, soul” and Middle Indo-Aryan appā “self”). Since reflexive constructions typically involve coreference between the subject and another argument, the reflexive morpheme need not to be overtly marked with a pronoun indexing the subject, as shown in (7a) and (7b). However, this is not a rule, and the reflexive may be augmented with a bound pronoun cross-referencing the subject, as in (7c). Note that in (7b), the phrase ‘an ġafle is borrowed wholesale from Arabic. Also noteworthy is the epenthetic approximant /ɔ/ inserted between the reflexive pā- and vowel-initial bound pronoun -ēs to avoid hiatus: pāvēs “themselves”. The reflexive pā- was also recorded in collocation with the benefactive relational noun kērā. It surfaces most often as pē kērā “for one’s self”, most probably pā-ē kērā (REFL-OBL for).

(7)  
\[ \text{a. ammat sā fikr nə-karənde ģer pā-ŋo-mā} \]
\[ \text{people all thought NEG-do.IMPFV.3PL except REFL-OBL.PL-IN} \]
\[ “All the people only think about themselves” \]

\[ \text{b. ‘an ġafle lakardā pā-s āvīn-ē-mā} \]
\[ \text{suddenly see.PFV.3SG REFL-ACC mirror-OBL-IN} \]
\[ “Suddenly he saw himself in the mirror” \]

\[ \text{c. bū maṣrī (h)rōs-sa pāv-ēs dakardēnd} \]
\[ \text{much money become.PFV.3SG-3PL REFL-3PL see.PFV.3PL} \]
\[ “They became rich (and) started to show off” \]

2.5 Demonstratives

The set of demonstratives in Aleppo Domari seems to have been somewhat restructured when compared to what is found in Palestinian Domari (Matras 1999: 27). No gender distinction was recorded. Compare for that matter hā ġvār “this woman” and hā čāgā “this boy”. In both cases, the demonstrative is invariably hā. This sharply contrasts with Palestinian Domari for which Matras gives a rather symmetrical paradigm in which nominative/oblique and masculine/feminine/plural are distinguished. In noun modifying function, the following forms
were recorded: ḥā, ē and ō. The contrast between distal ō and proximal ḥā is exemplified in (8). The form ē is used when the modified noun is marked for accusative (9a), or oblique case and a Layer II marker (9b).

(8) ḥā kər̪i ō kər̪i dūr-tar = e
    this house that house far-more=COP
  “This house is further away than that house”

(9) a. n̥-mang̥št̬ôme s̥nam ē ḡb-əs
    NEG-want.PROG.1SG hear.SUBJ.1SG this.OBL story-ACC
  “I don’t want to hear that story”

b. n̥-sāk̥ome  čār̪m  ē pānd-ə-tā
    NEG-can.IMPFV.1SG drive.SUBJ.1SG this.OBL path-OBL-SUP
  “I can’t drive on that road”

When used anaphorically, the following forms were recorded in the singular: ḥā, ḥān, ħānā, ḥanū, ḥnū, ṥr̪, ṭr̪. In the plural: ēr̪n, ḥānēr̪n, ōr̪n, ṭānōr̪n. There are two possibilities to account for the emergence of the Aleppo Domari forms ēr̪ and ōr̪. The first one is the elision of /h/ in ehe and uhu. This scenario presupposes that the forms found in Palestinian Domari are the original ones. The second option is that ē and ōr̪ arose from the erosion of the anaphoric forms ēr̪ and ōr̪- when used in noun modifying function. More data is necessary to provide an exhaustive analysis of the system of demonstratives used in Aleppo Domari, more particularly plural forms.

2.6 Interrogatives

All the interrogatives recorded in Aleppo Domari are inherited: kō “who”, kāy “what”, kačā “when”, kāt ~ katt “how”, ksē “why”, kā ~ kēta “where”, kēvā “where to”, kəzzēta “where from”, kāki ~ kakkī “which, what”. All these interrogatives are pro-forms. There does not seem to be any difference in meaning between kā and kēta “where”. However, they do exhibit syntactic dissimilarities. When the morpheme kā is used, no copula emerges: kā ērī? “where is the knife?” (where knife), kā qaddāḥ-ōr “where is your lighter?” (where lighter-2SG); the use of the copula or a verb is compulsory with kēta: kētā = ye kār̪y-ōs “where is your house?” (where=COP house-3SG). The morpheme kāki ~ kakkī can also function as an interrogative determiner: kakkī qāy̥š-ōs ḡass kare “what food do you like?” (what food-ACC like.IMPFV.2SG). Interestingly, the object in this last example is marked for accusative case, usually triggered when the object is definite. Aleppo Domari distinguishes between kṭi “how many” and kardā “how much”. The former is an interrogative determiner (10a) while the latter is a pro-form (10b). Syntactically, interrogation does not generally occur in situ but is sentence initial: kāy tōs-ər “what did he give you?” (what give.PFV.3SG-2SG)

22That is the syntactic slot of the constituent affected by interrogation.
2.7 Numerals

The following numerals were recorded: yēka ~ yōka “one” (short form yē), dōdī “two” (di when modifying a noun: dī vars “two years”), trān “three”, šēr “four”, panō “five”, šēş “six”, ḥəft “seven”, ḥaṣt “eight”, na “nine”, dazz “ten”, dazz yēk “eleven”, dazz di “twelve”, dazz trān “thirteen”, dašštā “fourteen” (< dazz šēr), dazz panō “fifteen”, dazz ḥəft “seventeen”, dazz ḥaṣt “eighteen”, dazz na “nineteen”, vīst “twenty”, vīst yēka “twenty-one”, vīst dādī “twenty-two”, vīst trān “twenty-three”, vī šēr “twenty-four”, sī “thirty”, čel “forty”, pēngā “fifty”, trān vīst “sixty”, trān vīst dāz dāz “seventy”, trān vīst vīst ~ šēr vīst “eighty”, šadd illa dāz “ninety”, šadd “hundred”, ḥazar “thousand”. Aleppo Domari draws on Kurdish for “six”, “seven” and “eight” (possibly “nine” as well). Tens until fifty are also borrowed from Kurdish, as well “hundred” and “thousand”. Above “fifty”, “twenty” is repeated, to which “ten” may be added. An exception is šadd illa dāz involving Kurdish šadd “hundred”, Arabic illa “except” and Indic dāz “ten”. The form *šēr vīst dāz to express “ninety” was not attested but cannot be ruled out. An interesting feature is the reduplication in “two” when the numeral is uttered in isolation: dōdī. This may also have been modelled on Kurdish where dudu (also dido) is used in isolation and du when it modifies a noun: du kes “two persons”. The numerals may be augmented with the plural marker -ē- followed by bound pronouns: tērn-ē-mā “the three of us”, šēr-ē-mā “the four of us”.

2.8 Adverbs

Adverbs of time: xog (xogā ~ xogōtī ~ xogōtinī) “yesterday”, aḡ (aḡā ~ aḡōtī ~ aḡōtinī) “today”, şebā “tomorrow”, isêm ~ hanisêm “now”, zammēş “long ago”.

Adverbs of place: ēta “here”, ŏta “there”.

Other adverbs: bū “much”, tikā24 “a little”, tikā tikā “slowly”, xalyā “quickly”, hazz(i) “still”.

Aleppo Domari draws on Arabic for other adverbial phrases such as ‘an ḡafle “suddenly” (also ḡafl-ē-ḥi), ḡaṣ’tan, taqriban “almost”, tab’ān “of course”. An interesting case of pattern replication appears in the phrase ṑēzק-α-τα “soon” (close-OBL-SUP) which obviously parallels

23There is most probably an underlying final /h/ in na “nine” that does not surface anymore in Aleppo Domari. This is suggested by data from Beirut Domari in which nahēs was recorded.
24The last vowel ē is the short allomorph of the indefinite marker -āk. This is apparent when the copula attaches to the right: vēl-ēs tik-āk = ē “he has little hair” (hair-3PL little-INDEF=COP).
Arabic ‘an qarib (from close), but employs the Kurdish derived adjective nêzêk “close” augmented with the inherited superessive marker -tā.

2.9 Nouns

Not many derivational affixes were found in Aleppo Domari. The most common is the indefinite marker -āk: kām-āk “a thing”. This suffix, also found in Palestinian Domari, is common in Kurdish and some Indic languages (Matras 1999:15). Unlike Palestinian Domari, the formative /k/ is most often elided: lāfty-ā “a girl” (girl-INDEF), kər̥y-ā “a house” (house-INDEF). The consonant /k/ is however compulsory when additional material is attached to the right: kər̥y-āk-əmā “in a house” (house-INDEF-OBL-IN), ṭəddy-āk=e “(it’s) an old woman” (old.woman-INDEF=COP). Interestingly, the suffix can co-occur with a short form of the numeral yēka “one”: dis-āk ~ yē dis-āk “one day”. The Arabic indefinite marker šī was also recorded: šī ḏis-ā “one day”. Gender as an inflectional category has been lost in Aleppo Domari. It only survives residually in derivational morphology: kaq̥ā “man” vs. kaq̥ī “woman”, dròngā “old man” vs. dròngī “old woman”. The feminine ending -ī also appears in ṭəddi “old woman”, but the masculine *ṭəddā was not attested (kočmārā “old man” is used instead). Other derivational suffixes found in the corpus are the nominalisers -iš: qāyiš “food”, māngiš “request”, rāwiš “walk”, mariš “burial”, bīnāviš “fear”, vāyiš “hit”; and -vāy: dərğuviy “tallness”, mištəviy “disease”, čāgvāy “childhood”. More data are needed to assess the productivity of these suffixes.

2.10 Layers of case marking

The concept of layers of case marking in Indo-Aryan languages was introduced by Masica (1991) and subsequently applied to Romani and Domari by Matras (1999 & 2002). Case marking in Domari is quite similar to what can be found in other Indic languages. Three layers are usually recognised. Layer I is a marker of non-nominative, traditionally labelled oblique, that attaches directly to the base. Layer II morphemes attach to the base augmented by the Layer I marker. Layer III markers usually consist of adpositions requiring that the head noun is augmented with a Layer II marker.

2.11 Layer I

The morphemes that attach directly to the lexical base in Aleppo Domari are -ās, -ə, and -ə̂. The extension -ās is an accusative marker, as evidenced by (11a). However, object marking is not systematic, as shown in (11b). Such a split is common in languages that exhibit differential object marking. This usually happens when the object is high on the topicality scale. Cross-linguistically, differential marking usually reflects a distinction between animate/inanimate or definite/indefinite (Lazard 1998:219). In Domari, definiteness is the main factor that governs object marking (Matras 1999:15). Aleppo Domari is not innovative in that matter and exhibits the same pattern, as evidenced when one of the informants, who was recalling what he had done in the morning, was telling us that he had asked his wife to prepare coffee for him. As a new participant introduced into discourse, the word for coffee remains unmarked (11b). In (11c) the
entity “coffee” is now identifiable as it has just been introduced, and therefore marked for accusative. This pattern of object marking is quite common in the languages of the area (Turkish, Persian, Levantine Arabic) and may well turn out to be an areal feature.

(11) a. taqriban sā’a dazz lvā kardōm talfizyōn-əs
    about hour ten open.PFV.1SG television-ACC
    “At about 10, I turned on the television”

b. gārdōm ġavr-ōm-tā abōm karər qahwa
    say.PFV.1SG wife-1SG-SUP for.1SG make.SUBJ.3SG coffee
    “I said to my wife to make some coffee for me”

c. kardā abōm qahw-ēs tərdōs-əs
    make.PFV.3SF for.1SG coffee-ACC put.PFV.3SG-3SG
    “She made the coffee for me and put it (down)”

The main function of the marker -ə in Aleppo Domari is to be the morphological support for the suffixation of Layer II case markers. In (12a), the Layer II ablative marker -ki cannot attach directly to the base and the oblique -ə needs to appear between the noun and the Layer II marker. As shown in (12b), the oblique marker also appears consistently after a close set of relational nouns that mainly express spatial relations (see below for a discussion of relational nouns). This is a remnant of what must have been the main function of the oblique marker in Aleppo Domari, that is to mark the modifier in genitive constructions (see below for a discussion of genitive constructions). While in Aleppo Domari, the genitive function of the oblique marker is mainly apparent with relational nouns, it is better preserved in other varieties (examples are from the dialect of Beirut): mans-a kri “the house of the man” (man-OBL house), dōm-a gāl “the language of the Dōm” (Dōm-OBL language), ‘arīs-a bāb “the father of the groom” (groom-OBL father), ‘arīs-a ’ābin “the clothes of the bride” (bride-OBL clothes).

(12) a. parme kəry-ə-ki
    return.1MPFV.1SG house-OBL-ABL
    “I go back home”

b. laur(ā) āšti šibbāk-ə qārši
    tree there.is window-OBL in.front.of
    “There is a tree in front of the window”

The marker -ən fulfils two functions. It marks plural accusative, as shown in (13), and serves as a plural oblique marker that allows the suffixation of Layer II markers as in (14). As noted above, accusative marking occurs only when the encoded participant is referential or identifiable.
In items borrowed from Arabic ending in -ə (feminine marker), the oblique case is usually realised -ə̃- and accusative case -ə̃s, as in (15) and (16). These allomorphs were also recorded twice with inherited items: agōr-əs (horse-ACC) (< Indo-Aryan ghōta) and z-lavr-ə-ki “from the tree” (from-tree-OBL-ABL) (< Indo-Aryan lakuta). In the plural, the Layer I marker is invariably -ə̃n: agōr-ən (horse-ACC.PL), laur-ən-ka “at the trees” (tree-OBL.PL-AD). The oblique plural marker was also recorded with akki “eye”: akky-ən-ki “from the eyes”.

Table 6: Layer II

The primary meaning of the inessive marker -mā is to indicate location, with or without confinement: *tuār-σ-mā “in town, in the market”, lībnān-σ-mā “in Lebanon”. It also extends to temporal expressions: *slāl-σ-mā “in the winter”, ḍis-σ-mā “in these days”. The marker -mā is also used with an instrumental meaning čāry-σ-mā “with a knife”, śākūš-σ-mā “with a hammer”. This is obviously the result of alignment with Levantine Arabic in which the preposition b- is commonly used for both locative and instrumental. The formative /m/ alone to mark location: kāryom “in the house”, pānyom “in the water”.

The morpheme -tā is used to indicate the top or the surface of the marked noun: sr-ōs-tā “on his head”, pānd-σ-tā “on the way”. It was also recorded with a simple locative meaning in mariš-σ-tā “at the burial”. It is also commonly used for time reference: ārāt-σ-tā “in the night”, sb-σ-tā “in the morning”, zamān-σ-tā “in the past, back in the old days”. Another common meaning cover by -tā is “about”: pčārdōs-σm pāpūr-σ-tā “he asked me about (his) grand-father” (ask.PFV.3SG-OBJ.1SG grand-father-OBL-SUP). One instance of instrumental meaning was found in the following example: qegeš-σ dōuštōme xasṭ-ōm-tā “I’m washing the clothes with my hands” (garment-ACC wash.PROG.1SG hand-1SG-SUP). The recipient of the verb gā kar “say” is also marked with superessive -tā, as apparent from (17):

(17) gārdōm\textsuperscript{26} trōtā qr-ōm-tā ģār ģīb karār vāšōr

say.PFV.1SG small son-1SG-SUP go.SUBJ.3SG speak.SUBJ.3SG COM.1SG

“I said to my young(er) son to go and speak with you”

\textsuperscript{26}This verb also appears in Macalister’s (1914) material but in a different form: gāl-kērdt barāşkē “she said to her brother”. The form gāl- was also maintained in Beirut but means “speak”: gāl škrōm “I spoke”. The recipient-like argument is marked in Palestinian Domari with the adessive marker -ka (kā in Macalister’s transcription), whereas Aleppo and Beirut Domari favour the superessive marker -tā.
This also extends to verbs borrowed from Arabic whose objects are introduced by the preposition ‘ala “on”: ‘arraʃ(h)rūm kāṭmār-āk-ə-tā “I met an old man” (meet.PFV.3SG old.man-INDEF-OBL-SUP). The verbal form ‘arraʃ(h)rūm is analysable as ‘arraʃ, from Arabic t‘arraʃ “to meet” and the Domari verbal root h- “to become” which is used as a light verb and serves to integrate foreign elements into Domari lexicon. The Arabic verb t‘arraʃ introduces its complement with the preposition ‘ala “on”. Accordingly, when transferred into Domari, the complement of the complex verb ‘arraʃ h- will be marked with the superessive marker -tā, whose primary meaning corresponds to Arabic ‘ala. This is a clear example of pattern and matter replications being active at the same time.27 Argument marking patterns without lexical borrowing are also prone to replication: nāvištōme tān nārn-ə-tā “I’m looking for three men” (< Arabic dawwar ‘ala “to look for something”). Noteworthy is the fact that no dative or allative functions were recorded, hence the impossibility to label the marker -tā “dative”, as in Palestinian Domari. In allegro speech, only -t may surface: xār-ə-t “on (his) mind” (mind-OBL-SUP).

The case marker -ka commonly translates the Arabic preposition ‘ind “at, by” (cf. French “chez”). It has a rather loose locative meaning and refers more typically to the place of residence or work: doktōr-ə-ka “at the doctor’s” (doctor-OBL-AD), garōm ē kağg-ə-ka “I went to that man’s place” (go.PFV.1SG DEM.OBL man-OBL-AD). It appears also very often in possessive constructions. This seems to be contact-induced and parallels possessive constructions in Arabic which also make use of the preposition ‘ind. Contrast (18a) and (18b), where only constituent order differs (see below for more on possessive clauses):

(18) a. tmīn-ka (a)šti tromblīlā (Domari)
   2PL-AD there.is car

b. fi ʿand-kun sayyāra (Arabic)
   there.is AD-2PL car
   “Do you have a car?”

The comitative marker -sa has a straightforward meaning and denotes companionship: ǧīb kārdom māyn-āk-ə-sa “I spoke with a woman” (speak.PFV.1.SG. woman-INDEF-OBL-COM). No instances of instrumental meaning were recorded. It should be added that companionship may also be expressed periphrastically through the coordination of two NP’s by way of the conjunction la “and”: bāzār-ə dis ǧāme ǧāmʾ-ə-ki mā la di bēn-ē-m “On Friday, I go to the mosque with my two sisters (me and my two sisters)” (Friday-OBL day go.IMPFV.1SG mosque-OBL-ABL me and two sister-PL-1SG).

The versative marker -va is not very frequent in the corpus and, to the best of my knowledge, does not appear in any other source about Domari.28 It occurs most frequently in the interrogative

---

27Matter and pattern replication are taken from Matras (2009a) who provides an interesting model of language contact. Matter replication refers to the borrowing of linguistic material, or in Heine & Kuteva’s terminology “the transfer of linguistic form-meaning units” (Heine & Kuteva 2005). Pattern replication refers to the transfer of underlying morphosyntactical structures and relations (see in particular Matras 2009a:234-274).

28It was also recorded in the dialect of Beirut and in the dialect of Sarāqib so it appears to be shared by all northern varieties.
kēva “where to?” (kēva garā “where did (s)he go?”). It was also recorded in temporal expressions: tammūz-ə-va “from july (onwards)”, and the locational adverb fātnāwa “above” (together with fātnāka, marked here with adessive -ka). When it marks a noun denoting a location, its meaning is closer to “towards, in the direction of” rather than a bare allative encoding destination. For this purpose, the noun is zero-marked or marked with -ki (see below). If the noun marked with -va refers to time, its meaning is “for, since”.29 The marker -va is most likely to have been borrowed from Kurdish (Kurmandji va, Sorani (a)wa), in which it appears as a postposition that can combine with other prepositions to express a variety of spatial meanings.30

The marker -ki is highly multifunctional. The term “ablative”, which appears in both Macalister (1914) and Matras (1999), has been maintained here because it seems that its primary function is to encode source, as suggested by (19).

(19) bēn-ōs parde uyār-ə-ki
    sister-3SG return.PRF.3SG market-OBL-ABL
    “His sister has come back from the market”

However, -ki was also recorded to encode destination, to mark the recipient-like argument in ditransitive constructions, as a prepositional case and also in genitive constructions (see below). The allative function is probably the most surprising, especially if it is acknowledged that -ki is originally an ablative marker. In (20), its presence or absence was equally accepted:

(20) hatta rāštan uyār-ə-ki ~ uyār
    in order to arrive.SUBJ.1PL town-OBL-ABL town
    “In order to get downtown”

This suggests that -ki does not encode origin or goal, but simply motion. The ablative or allative interpretations are given by the semantics of the verb. This kind of syncretism is said to be particularly rare cross-linguistically (Creissels 2009: 615).31 A possible explanation for this is that Aleppo Domari has acquired from Western Iranian and Arabic a set of prepositions, amongst which one finds z- “from”, leading to a morphological hypercharacterisation on the head noun which is marked twice for ablative, as evidenced by these examples: z-mistašfā-ki “from hospital” (from-hospital-ABL), z-dāwat-ə-ki “from the wedding” (from-wedding-ABL). It is very likely that the morpheme -ki in these examples does not encode source any longer but simply became a prepositional case. The source encoding function would thus solely be carried by the preposition z-. The marker -ki used as a prepositional case was also recorded in the

29 An example recorded in the dialect of Beirut is šēš wars-ə-wa wēṣr(e) ēta “he’s been living here for six years” (six years-OBL-VERS stay.PFV.3SG here).
30 One example in Suleymaniyah (Iraq) Kurdish in which awa combines with the preposition la with an ablative meaning: la karkik-awa “from Kirkuk” (McCarus 2009:601).
31 The term “motative” is used to capture the semantics of this case in Ardeşen Laz (Kutscher & Genç 2006: 251). It may be an alternative to the term “ablative” in Aleppo Domari. Saying that the ablative case can be used to encode destination may indeed sound contradictory.
following (see below for a discussion of prepositions, the so-called Layer III markers): \textit{qabl ē xaṭr-ē-ki} “before that time, previously” (before this.OBL time-OBL-ABL). Another common function of -\textit{ki} is to mark the recipient-like argument in ditransitive constructions, as in (21):

\begin{verbatim}
(21) tōm dād-ōm-ki bkēz guštary-ā
    give.PFV.1.SG. mother-1SG-ABL nice ring-INDEF
    “I gave my mother a nice ring”
\end{verbatim}

As shown above, argument marking patterns of certain verbs are also transferred from Arabic into Domari. The Arabic verb \textit{xāf} “he was afraid” introduces its complement with the preposition \textit{min} “from”: \textit{bīxāf min īn-nār “she is afraid of fire” (fear.IMPFV.3.SG.f. from DET-fire). This in Domari becomes \textit{byāre āg-ō-ki} (fear.IMPFV.3SG fire-OBL-ABL). It is very likely that the marking of the complement of Domari \textit{bi}- “fear” with -\textit{ki} is a case of pattern replication.

### 2.13 Layer III

Layer III markers are represented by a set of prepositions borrowed from Iranian languages and Arabic. From Iranian, only two were recorded: \textit{z} “from” and \textit{vē} “without”; from Arabic: \textit{qabl “before”, ba’d “after”, b- ē bē “with (instrument)” and badāl “instead”}. Traces of \textit{z}- were neither found in Kurmanji nor in Sorani. It is however common in Persian (\textit{az “from”). Accordingly, Domari \textit{z}- may have been borrowed from a variety of Persian. The preposition \textit{z}- is not a recent borrowing as it is already mentioned in Newbold (1856:312, see above). It mostly appears with the Layer II ablative marker -\textit{ki} which acts here as a prepositional case marker (see above): \textit{za-tān-ō-ki “from (this) place” (from-place-OBL-ABL), z-laov-ē-ki “from the tree”. Instances of \textit{z}- alone were also found: \textit{zō-tyār “from the market”, z-ētā “from here”, z-aśrafiyye “from Ašrafiyye (a neighbourhood in Aleppo)”. The absence of -\textit{ki} may be lexically conditioned and the use of \textit{z}- alone restricted to certain items, mostly locational expressions. The preposition \textit{z}- may also co-occur with the adessive marker -\textit{ka}. It commonly translates the combination of Arabic \textit{min “from” and īnd “at” and faithfully combines the semantic load of both Layer III ablative z- and Layer II locative -\textit{ka}: z-bēn-ōr-ka “from your sisters’ place” (from-sister-2SG-AD), z-bēly-ōm-ka “from my friend’s place” (from-friend-1SG-AD).

The preposition \textit{bī- “with (instrumental)” was also borrowed into Kurdish from Arabic, so it may well be the case that \textit{b}- was initially borrowed from Kurdish and not from Arabic. Its use appears quite marginal in Aleppo Domari, most probably because several strategies compete in Domari to express instrumental, the most common being the inessive marker -\textit{mā}. The modified noun was recorded once with ablative -\textit{ki}: b-ē xēzarān-ō-ki “with that stick” (with-this.OBL stick-OBL-ABL); and once without Layer II marker: bī čē “with a knife”.

The preposition \textit{vē} is probably a loan from Kurdish. Strangely enough, in Kurdish (and Persian), this preposition is realised with a /bl/. One possible explanation is that /bl/ was turned into a /l/ in Domari to avoid homophony with the preposition \textit{b-}. Ablative marker -\textit{ki} after \textit{vē} was recorded only after free pronouns: vē mā-ki “without me” and vē tār-ki “without you”. These can be replaced by Arabic \textit{dūn “without”, augmented by bound pronouns: dūn-ōm “without me”. The preposition \textit{vē} also appeared with a zero-marked noun: vē daff “without
wood”. Arabic qabl “before” is commonly used. Instances of use with ablative -ki were recorded with nouns and free pronouns: qabəl tər-ki “before you”, qabəl ē xatr-ē-ki “before that”. Another common meaning of qabl in Arabic is “ago”: qabəl sinṭən “two years ago”. This was rendered in Domari qabəl dí vârs, without the head-noun being marked with -ki. The Arabic preposition ba’d “after” was also borrowed into Domari. In all recorded tokens, the head-noun is never modified by -ki. ba’d ʃtār dîs “four days later”. No instances of modified pronouns could be recorded. It seems there are alternative ways in Domari to express the same meaning. One of the informants judged equivalent these two sequences: ba’d tikā ~ tikā dərmi “soon, in a moment”. It is likely that ba’d is a recent borrowing and replaced a morpheme of Iranian origin. This is suggested by the way of expressing “afternoon” as shown in (23).  

\[(23)\]  

\[\text{FUT} \quad \text{pāwom} \quad \text{pāsōr} \quad \text{nîmro} \quad \text{pāștar}\]  

“\[\text{I’ll come to your place in the afternoon}\.\]”  

Another Arabic preposition that was replicated into Domari is badāl “instead”: badāl siqiq-ə-ki “instead of suji (Turkish sausage)”. Other core Arabic prepositions such as ma‘ “with”, fi “in”, min “from”, ʿala “on, to”, la “to, for” and ʿind “at” did not make their way into Aleppo Domari.

### 2.14 Syntax of the noun phrase

In genitive constructions, the most common order is modifier-head. One possibility is to have the modifier marked for ablative case, and the head-noun augmented with a 3rd person bound pronoun indexing the modifier. This is the favoured pattern for NP’s whose syntactic position does not impose additional morphological marking: lāfchy-ə-ki bāb-ōs “the father of the girl” (girl-OBL-ABL father-3.SG.), bakr-ə-ki panir-ōs “lamb cheese” (lamb-OBL-ABL cheese-3SG); or more complex constructions, as evidenced in (24). Contrary to Palestinian Domari which exhibits singular agreement, the 3rd person bound pronoun agrees in number with the modifier: dî bēn-ə-m-ki dām-ōsān “the room of my two sisters” (two sister-PL-1SG-ABL room-3PL). The marker -ki on the modifier drops when other morphological material is suffixed. Under the same conditions, the bound pronoun indexing the modifier on the head also drops: ahl-əm kɔr “the house of my family”, mām-ōm qər “my cousin”. This is also exemplified in (25). Another reason to avoid ablative marking on the modifier in (25) is that the head-noun is already marked with -ki, which obviously refers to motion (see “motative” above). This constituent order in genitive constructions seems to be quite stable and no instances of head-modifier order were recorded, suggesting that convergence with Arabic did not take place in genitive constructions. This

---

The morpheme pāștar was not recorded in other contexts and may be linked to Iranian pošt “back” (Kurmanji pişt). The word nîmro is most probably a borrowing from Kurdish (Kurmanji nîvro). What is more puzzling is the consonant /m/ and not /v/ (or for that matter /v/), showing that nîmro must have been borrowed from dialectal Kurdish or another variety of Iranian (c.f. Persian nīm “half”). The morpheme nîm also appears in nîm ārīt “midnight” and nîm sīl’a “half an hour”. In the dialect of Sarāqīb, ba’ad nîmro (after noon) was recorded, whereas the dialect of Beirut simply borrowed the Arabic phrase ba’d ʃd-dɔhɔr (after DEF-noon).
sharply contrasts with what is recorded in contemporary Palestinian Domari, in which the order is constantly head-modifier, displaying total convergence with Arabic (Matras 1999:22).

(24)  
\[
\begin{align*}
\text{č} & \quad \text{məns-č-ki} & \quad \text{sr-čs-tā} & \quad \text{qol} & \quad \text{āštā} \\

\end{align*}
\]

“There was a hat on the head of this man (this man had a hat on his head)”

(25)  
\[
\begin{align*}
\text{garōm} & \quad \text{tāšī} & \quad \text{lāfty-čs} & \quad \text{dāwat-č-ki} \\
\text{go.PFV.1SG} & \quad \text{COM.3SG} & \quad \text{girl-3SG} & \quad \text{wedding-OBL-ABL}
\end{align*}
\]

I went with her/him to the wedding of her/his daughter

When the head-noun is modified by an adjective, the most common order is also modifier-head. The adjective is marked with the central vowel [č], homophonous with the oblique marker -č: trot-č bār-čm “my little brother” (little-OBL brother-1SG), trol-č lāfč-y-ā “a little girl” (little-OBL girl-INDEF). This sharply contrasts with Palestinian Domari where the adjective agrees in gender with the noun it modifies: tilla zara “the big boy” vs. tili lāši “the big girl” (Matras 1999:27). The Palestinian pattern is of course most likely to be the original one and here again Aleppo Domari underwent restructuring as a result of the neutralisation of gender distinction. As noted above, short vowels show a strong tendency toward centralisation and it may well be that this vowel was reinterpreted as the oblique marker, further extending its function to mark another kind of head-modifier construction. It should be added however, that certain adjectives were never recorded with the oblique marker: bkeč qāyiš “good food”. It is also elided in the presence of homorganic consonants: trol čãgã “little boy”, drōng kəry-čk-čm “in a big house” (big house-1SG-OBL-IN).

The linear arrangement described above is not systematic and the order head-modifier was also recorded: trombili čam “a new car”, lāfč-y-ā muhtašim “a well-behaved girl” (girl-INDEF well-behaved). There are hints that alternation of word order within the NP may be partially sensitive to definiteness. While the order modifier-head is clearly unmarked as far as definiteness is concerned, the order head modifier always refers to indefinite entities.

As far as comparative constructions are concerned, Aleppo Domari shows Kurdish, Turkish and Arabic influence. From Kurdish, it borrowed the widespread Iranian marker -tar to derive comparatives. Since it carries stress, it behaves as a real affix and forms a new phonological word: drōngã “big” vs. drōng-tār “bigger”, dūr “far” vs. dūr-tār “further”, zangil “rich” vs. zangil-tār “richer”. It was once recorded -tā: xalya-tār ~ xalya-tā “faster” (< xalya “fast”). Suprisingly, when the standard is a full NP, it remains unmarked, as illustrated in (26a). This pattern is found neither in Kurdish nor in Arabic in which ablative marking prevails (by way of a preposition: ji “from” in Kurmandji, min “from” in Arabic). However, when it appears as a pronoun, it is marked for ablative, as in (26b).

(26)  
\[

\end{align*}
\]

“His house is bigger than my house”
The Domari Language of Aleppo

2.15 Relational nouns

As described above, Aleppo Domari shares with Palestinian Domari and more generally with New Indo-Aryan languages a nominal morphology based mainly on two layers. Layer I is the suffixation to the base of an oblique marker, often similar to the accusative marker. It was noted that in Aleppo Domari, the Layer I system was restructured to differentiate the Layer I oblique marker from the accusative. It is most likely that this restructuring is the outcome of the loss of gender as an inflectional category in Aleppo Domari. Indeed, data available from Palestinian Domari suggest that the marker -as was restricted to masculine nouns, while -a was used with feminine nouns (Matras 1999: 17-18). This, in all likelihood, represents the old, conservative pattern. Since gender distinction was lost in Aleppo, -as was reassigned as a general accusative marker and -a as a general oblique marker. Layer II markers attach to the right of the base, itself augmented with the oblique marker: kir-ơ-tă “on the milk” (milk-OBL-SUP). Morphologically, the Layer II markers qualify as affixes because they are very selective about the lexical category they attach to (mainly nouns). Phonologically, however, they would rather qualify as clitics because they are never stressed, as if the last segment of the phonological word was the oblique marker -ơ. Accordingly, it may be more accurate to write kir-ơ=tă rather than kir-ơ-tă. Layer II markers most probably emerged from the grammaticalisation of relational nouns used in genitive
constructions. This would also explain why Layer II markers are not stressed. Such a class of relational nouns still exists in Domari and mainly expresses spatial relations. The following items were recorded: \(\text{vāgār} \) “in front of”, \(\text{qāršī} \sim \text{qārčī} \) “in front of”, \(\text{pačī} \) “behind”, \(\text{čanč}-\) “next to”, \(\text{bārā} \) “outside”, \(\text{maŋgi} \) “inside”, \(\text{xor} \) “inside, in the middle”, \(\text{čōrm} \) “around”, \(\text{vatūn} \) “above”, \(\text{ār} \) “between”, \(\text{bnā} \) “under” and also benefactive \(\text{kērā} \) “for”. These relational nouns appear syntactically as heads of genitive constructions, although they are more like modifiers semantically. The modified noun in such constructions is always marked with the oblique marker: \(\text{ʿ} \) “in front of the mosque”. The relational noun “in front of” is rendered with two competing morphemes: \(\text{i} \) (also realised \(\text{i} \)) and \(\text{gər} \sim \text{vəgər} \). The former is initially a Turkish morpheme \(\text{şɪ} \) “face” borrowed into Domari probably through Kurdish, while the latter is inherited: \(\text{kəry-ə} \sim \text{kəry-ə vəgər} \) “in front of the house”. The consonant \(\text{v} \) is likely to be epenthetic. When it is not realised, the oblique marker may drop: \(\text{maħall āgər} \) “in front of the shop”. The morpheme \(\text{pačī} \) “behind” is also inherited: \(\text{qāpy-ə pačī} \) “behind the door” \(< \text{Turkish kap} \) “door”), \(\text{pišt-ə pačī} \) “behind (his) back”, \(\text{gağg-ək-ə pačī} \) “behind a man”. To express proximity, Domari makes use of the morpheme \(\text{čanč}-\). It may be used alone: \(\text{laur-̣e čanč=e} \) “(it’s) next to the tree”; but it appears most often combined with the superessive marker \(-tā\), as exemplified in (27):

(27) \(\text{laurā kəry-ə čanč-ə-t=e} \)

\(\text{tree house-OBL next-OBL-SUP=COP} \)

“The tree is next to the house”

The root \(\text{čōrm}-\) marked for plural combined with the superessive marker \(-tā\) is used to express the spatial relation “around”: \(\text{čōrm-ə-s-tā} \) “around him” \(\text{(around-PL-3SG-SUP)}, \text{kəry-ə čōrm-ən-tā} \) “around the house” \(\text{(house around-OBL-PL-SUP)}\). It is still unclear whether \(\text{čōrm}-\) is still a productive nominal root in Domari or only survived in this context. The inherited morpheme to express “outside” is \(\text{bārā} \) and is also postponed to the noun, as in shown (28):

(28) \(\text{vēsrōm tikā kəry-ə bārā} \)

\(\text{stay.PFV.1SG little house-OBL outside} \)

“I stayed a little bit outside the house”

There are a couple of ways to convey inessive meaning. Most commonly this is carried out by the Layer II marker \(-mā \). Another way is to use \(\text{maŋgē} \) “in” augmented with what seems to be the 3rd person singular bound pronoun allomorph that attaches to the close set of preposition-like morphemes: \(\text{kəry-ə maŋgē} \) “inside the house”. Most often though, this is expressed with the morpheme \(\text{xor} \) whose primary meaning is “heart” (see below).

In Palestinian Domari, Matras (1999:20-21) identified another Layer II marker fulfilling a benefactive function: \(-ke\). This marker originally comes from \(\text{kērā} \), still attested in Macalister’s material but not in contemporary Palestinian Domari \(\text{(except in amakera “for me”). The corresponding form in Aleppo Domari is kērā and also has a clear benefactive meaning. Its inclusion into the set of Layer II markers is not possible because it behaves as an independent phonological word, being normally stressed on the last syllable: ārāt-̣ō kērā “for the night”.

Linguistic Discovery 10.2:1-52
Moreover, kērā is never reduced to -ke in Aleppo Domari. For these reasons, kērā is best analysed as a relational noun. It is also striking that Domari has kept almost intact the form attested in Middle Indo-Aryan kāira (< Old Indo-Aryan kāryā “to be done”, see Masica (1991:212)). It is also frequent for kērā to appear in collocation with xor “heart”: alla xor-kērā “for God’s sake”, bār-ōm dāwat-ə xor-kērā “for my brother’s wedding” (brother-1SG wedding-OBL heart-for). It seems that the sequence xor-kērā is undergoing lexicalisation. This is suggested by stress, carried by the last syllable: xor-kērā, and also by the lack of oblique marking on xor. *xor-ə kērā. It should be noted however that xor and kērā reappear as two separate entities when bound pronouns are suffixed, as these normally attach to xor: xr-ōs kērā “for him”. An alternative meaning is “because of”: mišto(h)rā xr-ōs kērā “(s)he got sick because of him”, kam-āk-ə xor-kērā z’ollā vešōm “he got angry at me because of something” (thing-INDEF-OBL because get.angry.PFV.3SG ABL.1SG). The morpheme kērā, unlike what is reported in Palestinian Domari, was never recorded in collocation with free pronouns (only abōm kērā “for me” surfaces once in the corpus, suggesting it is marginal).

The morpheme xor “heart” is often used as a relational noun to denote confinement. It is never used alone and was recorded augmented with bound pronouns, the inessive marker -mā and the ablative marker -ki. The following example illustrates its use with bound pronouns: finğan-ə xr-ōs “inside the cup” (cup-OBL heart-3SG). The 3SG bound pronoun obviously refers to finğan. Since plural items were not recorded in this position, it remains unknown whether 3PL -sā(n) would be used in such a case. On pure prosodic grounds, a form such as xr-ōs is best viewed as a clitic because primary stress falls on the oblique marker: finğan-⟨-⟩xr-ōs, not the last syllable (*finğan-xrōs). This makes it look more like a Layer II marker rather than a relational noun. The formative xor was also recorded with the Layer II markers -mā and -ki. The morpheme(s) xor-ki denotes a complex spatial relation combining source and confinement: “from inside”; sometimes labelled “inrelative”: kāry-ə xor-ki “from inside the house” (house-OBL ABL). Here again, prosodic considerations would lead one to conclude that xor-ki is best interpreted as a clitic, and thus as a Layer II case marker because it remains out of the domain of stress: kāry-⟨-⟩xor-ki. This is also suggested by the fact that no oblique marker appears between xor and ki, making it look like a single morpheme. When xor is augmented by inessive -mā, its semantics does not seem to be very different from -mā alone: vyār-ə xr-ə-mā ~ walār-ə xr-ə-mā “in town” (town-OBL heart-OBL-ABL). A gemination of /n/ was also recorded: vyār-ə xr-ən-mā. The underlying form in this last example is most likely to be vyār-ə xr-ən-mā where xr-ən should be interpreted as marked for plural oblique case. The gemination results from the assimilation of /n/ to /m/. The morphological structure is thus as follows: town-OBL heart-OBL-PL.-IN. In this case too, prosody speaks for clitichood. It should be noted however that xor has retained here its nominal nature because it appears with an oblique marker. This shows that xor is still between two categories: it kept nominal properties, but also exhibits properties shared with other bound morphemes, most notably clitics. This is also clear evidence that the grammaticalisation process is still under way.

Aleppo Domari makes use of the Turkish morpheme ar- to express “between”. It is augmented with the inessive marker -mā: ammat-ə ār-ə-mā “amongst the people” (people-OBL between-OBL-IN). Interestingly, “amongst them” was recorded ār-ə-sā-mā (between-OBL-3PL-IN) and ār-ō-sā-mā (between-SG-3PL-IN). The modified noun may also be augmented with
ablative -ki as shown in (29). The spatial relation “under” is expressed by means of the word bnā, most probably borrowed from Kurdish bin- “under, below”: laur-ē bnā “under the tree”, tāwl-ē bnā “under the table”. For “above”, Aleppo Domari uses the morpheme vatūrm. taxt-ō vatūm “above the bed”.

2.16 Other NP modifiers

Other nominal modifiers commonly encountered are ġēr “other” (< Arabic ġēr “other”), kōmā “a lot of” (< Arabic kōma “a pile, a lot”). These appear before the head: ġēr kam-ā “something else”, kōmā məşri “a lot of money”. Arabic ġēr seems to be replacing the older morpheme bēvk- “other”. The latter was recorded in the speech of the oldest informant: nā bēvk-ā gağ-ōs “bring the other man” (bring.IMP.2SG other-OBL man-ACC). The interrogative kti “how many” may also be used as pre-nominal modifier: kti sikāra “a couple of cigarettes”. This is obviously a case of pattern replication from colloquial Arabic in which the interrogative kam ~ akamm “how many” is also used as a pre-nominal modifier. The combination of the numerals di trān “two three” was also recorded: di trān kamā “a couple of things”. The head-noun is also marked with the indefinite marker -āk. The numeral di “two” may also be postposed to time expressions in the sense of “after, another”: dis-ā di “another day”, tikā di “soon (after a little)”, vār-ā di “after a year, in a year”, di trān dis-ā di “after a couple of days”. The inherited quantifier bū “a lot” has a rather floating syntax and can appear before or after the noun it modifies: bū ammat ~ ammat bū “many people”. The Arabic morpheme wala “not (any)” was borrowed into Domari as a noun determiner: wala xatā “never (literally no time)”, wala tān-ā-ka “nowhere (literally at no place)” (no place-OBL-AD). The Kurdish determiner har “each, every” appears to be quite common in Aleppo Domari: har käm “everything”, har dis “every day”. The morpheme mōr, whose etymology and exact morphological status have still to be uncovered, was also recorded. Its meaning appears to be close to Arabic wala: kwā-mōr “nobody, anybody”, kyā-mōr “nothing, anything”, tā-mōr “nowhere, anywhere”, māni- mōr “no hindrance, any hindrance”, dōm-mōr “no Dōm, any Dōm”. The formative -ā in ky-ā-mōr “something, anything” and kw-ā-mōr “someone, anyone” is most probably the short form of the indefinite marker -āk. The initial elements ky- and kw- are best viewed as allomorphs of the interrogatives kay “what” and kō “who”. Another inherited quantifier is sā “all”. It is always placed after the head. This

33 It may be linked etymologically to Early Romani -moni, described as a “free-choice modifier” (Elšík & Matras 2006:77-78). However, -moni is generally seen as a borrowing from Greek monos “one”.

34 This is suggested by data from the Domari dialect of Sarrāqib (northern Syria) in which the following forms were recorded: kw-āk-ō-sā “with someone” (who-INDEF-OBL-COM), ky-āk-ō-tā “on something” (what-INDEF-OBL-SUP).
morpHEME is autonomous as far as stress assignment is concerned, suggesting it cannot be considered an affix or a clitic but rather a free morpheme: mširy-ē-m sā “all my money”, ammat sā “all the people”. An interesting behaviour occurs with nouns denoting time reference modified by sā. These were recorded with a suffix whose surface form is -s, resembling the Layer I accusative marker: ārātōs sā “all night long”, disās sā “all day long”. It is likely that the underlying form is not -s but -n, which would subsequently assimilate to /s/. This is suggested from temporal expressions marked with oblique -n and Layer II superessive -tā as in ārāt-ōn-tā “in the night”, sb-ōn-tā “in the morning”, zāmān-ōn-tā “in the past”. It is still obscure why ārātōs sā and disās sā would be marked with plural oblique -n without Layer II marker. One possible explanation is that oblique case also serves to mark temporal expressions.\textsuperscript{36} Numerals appear at the left and don’t trigger plural agreement on the modified noun: panā vārs “five years”, trēn ġib “three languages”. Plural agreement is only triggered when the head noun is augmented by bound possessive pronouns: dī bēn-ē-m “my two sisters” (two sister-PL-1SG). As mentioned above, indefiniteness may be overtly marked morphologically (the suffix -āk), or syntactically by a short form of the numeral yēka “one”: yē dis-ā, and also in speech of some speakers by the Arabic determiner šē. šī dis-ā “one day, some day”.

3. The Verb

Aleppo Domari has four inflectional categories labelled here perfective, imperfective, subjunctive and progressive. The verb consists of a root, to which various derivational and inflexional morphemes attach. There are simple verbs, and complex verbs. Simple verbs consist of one lexical root, whereas complex verbs consist of an invariable element carrying most of the semantic load and a light verb carrying morphological information. Two light verbs were recorded: h-, whose primary meaning is “become” and kar-, whose primary meaning is “do” (see discussion below).

3.1 Simple verbs

In the perfective, according to the nature of the last element of the lexical root, certain formatives will be selected: /r/, /d/ and /rd/. The consonant /r/ appears systematically after /l/, while /d/ appears after a consonant. As far as /rd/ is concerned, it is still unclear what reasons lie behind its selection and it is very likely that any explanatory attempt will have to take a diachronic stand. Diachronically, Domari closely resembles Romani and other Indo-Aryan languages as far as formation of the perfective is concerned, that is the recruitment of the old participle to form the base of the new perfective paradigm. The Old Indo-Aryan past participial marker -i- is the main source of the perfective marker in both Domari and Romani (Matras 2002:138). In Domari, an environment based split into /r/ and /d/ must have occurred. The appearance of /rd/ may be a later

\textsuperscript{35}Interestingly, sā did not survive in Palestinian Domari, in which Kurdish gišē is used (Matras, p.c.). Romani also exhibits a cognate form.

\textsuperscript{36}Macalister (1914) reports similar forms in Palestinian Domari for which he writes: “Adverbs of time are formed by adding -ān, -ātn to the substantive: as dis, day; disan, daily; ārāt, night; ārātan, nightly; sūbah, morning; sābhātan, in the morning”.

\textit{Linguistic Discovery} 10.2:1-52
development triggered by the structural integration of the light verb *kar-* to certain lexical roots. There are signs that this process is still active synchronically, as suggested by the verb *gā kar-* “to say”, obviously from *gāl kar-*, whose literal meaning is “make speech” (< *gāl* “word, speech”; the form *gāl kar-* is attested in Macalister’s material). In contemporary Aleppo Domari, this verb is mostly realised *gā kar-*, in which */l/ dropped. The root can further shrink, leading to the disappearance of */l/. So equally possible for “I said” are *gā kardōm* and *gārōdīm*, as if the lexical root had become */gā-. This is also suggested by the progressive forms of the verb: *gā-shōme ~ gā ka-shōme* “I’m saying” (say-PROG.1SG, see below for a discussion of the progressive). The subject agreement markers -ōm, -ōr, -ā, -ēn, -ēs, -ēnd attach to the right (see below). What is striking compared to Palestinian Domari is that no gender distinction was recorded for the third person singular.37 Also different is the 3PL marker.38 Only the 3SG agreement marker shows allomorphic variation when object bound pronouns are suffixed: *mē-c(rd-ā* “(s)he kissed” vs. *mē-c(rd-ōs-ōs* “(s)he kissed him/her”. The root *mē-* “kiss” selects the extension -rd- to form the perfective (the central vowel [ə] is epenthetic). The suffixation of the 3SG object pronoun -ōs triggers the allomorph -ōs instead of -ā.

Table 7: Perfective

The imperfective is formed by adding the following subject agreement markers to the base: -əm(e), -ē; -ō, -ər(e), -ən(e), -əs(e), -ənd(e). The morpheme -e that appears to the right was labelled by Matras (1999:30) a “contextualising marker” (see below). It always appears at the rightmost of the verbal word, that is, if an object pronoun is inserted, it will be placed between the subject marker and -e. anna *hass kammar-e* (< *hass kar-m-ər-e*) “I like you”. The 2SG has an allomorph -ō- before bound object pronouns: tō *hass kar-ō-m-e* “you like me”. An epenthetic consonant [v] is inserted between the 2SG subject marker and stems that end in a vowel: *hyāv-ē* “you fear”, *pčāv-ē* “you ask”.

37Palestinian Domari: *gara* “he went” vs. *garī* “she went” and *laherda* “he saw” vs. *laherdi* “she saw” (Matras 1999:29). The same distinction is reported by Macalister (1914). Corresponding forms in Aleppo are *garā* “(s)he went” and *lakardā* ~ *dakardā* “(s)he saw/found”.

38Aleppo Domari seems to be more conservative in that regard. The form given by Matras (1999:29) in Palestinian Domari is -e, most probably a reduction of */-ēnd*. However, the consonant */l/ survives in the allomorph */-ed/* when an object pronoun is suffixed: *laherde* “they saw” vs. *laherdedēs* “they saw it”. Matras does not analyse it as a case of allomorphy but as “a reduplication of the perfective extension” which is “phonologically motivated” (Matras 1999:29). The same allomorph appears also in Matras (2000): *maredēs* “they killed him”; also most probably analysable as *mard-ēd-ēs* (kill.PFV-SUB.3PL-OBJ.3SG). The corresponding form in Aleppo Domari would be *mārd-ēnd-ōs*.
The subjunctive typically consists of the root, to which the imperfective subject markers attach, but without the “contextualising marker” -e. In the 2SG, the ending -ā appears instead of -ē. When bound object pronouns are suffixed, the morpheme seems to split into two parts: kar-ō-s-ā “(that) you make it” (possibly make-SUBJ.2SG-OBJ.3SG-SUBJ). The subjunctive of pi- and ɡān- is thus totally predictable. However, a certain number of roots behave differently and see the insertion of the suffix -ē between the root and the subject markers. This is the case of nango-ē. It may seem from this ordering that the subjunctive is derived from the indicative by way of subtractive morphology. In the case of verbs like pi- and ɡān-, it is of course better to view the imperfective as derived from the subjunctive as it simply involves the suffixation of the so-called “contextualising marker” -e. However, this is impossible with verbs which require the suffixation of -ē between the root and the subject markers, hence the need to posit three different stems for each inflectional category. The suffix -ē is a feature encoded in the lexicon as there seems to be no rule that permits to predict its presence or absence. Some verbs may appear with or without it. These is the case for the root āv- “to come” for which three forms were recorded, two are zero-marked and one marked with -ē: āv-ēr ~ pāv-ēr ~ āv-ēr “(that) he comes”.

Table 8: Imperfective

In the speech of one informant, the subjunctive suffix was constantly realised [t̪]. It is still unclear whether [t̪] comes from [t̪] or the other way around. According to Matras (1999:32-33), -ē (-e in Palestinian Domari) comes from the integration of the auxiliary (a)čē: “to stay” to the verbal base. If this turned out to be valid, [t̪] would be the original form, whereas [t̪] would be a later development. Verbs whose roots end in /s/ and select -ē in the subjunctive exhibit the cluster /ʃt/: vēšt- (< vēš- “stay”), rāšt- (< rās- “arrive”), nāšt- (< nās- “quit”).

Table 9: Subjunctive

Linguistic Discovery 10.2:1-52
The imperative bears morphological similarities with the subjunctive. For verbs like *pi-* and *gân*, the 2SG simply consists of the lexical base: *pi* “drink!”, *gân* “know!”; whereas the 2PL is identical to the 2PL subjunctive: *py-âs* “drink (PL.)!”, *gân-âs* “know (PL.)!”, *kar-âs*! “do (PL.)!”. For verbs that require the suffix -č- in the subjunctive, the 2SG is formed by adding -ti to the root: *lak-ti* “look!”, while the 2PL is identical to the subjunctive: *lak-č-âs*! “look (PL.)!”. For other persons, the subjunctive suffices to express invitation or order: *štî gân* “get up (and) let’s go!” (get.up.IMP.2SG go.SUBJ.1PL). This being said, some discrepancies between the subjunctive and the imperative were recorded in some irregular verbs. This is the case with the root *qâ-* “eat”: *qâyrôm* “I ate”, *qâme* “I eat”, *qammyâm* “(that) I eat”, *qaymî* “eat!” (plural *qammyâs*); *âv-* “come”: *âyrôm* “I came”, *âwme* “I come”, *âwêm ~ pâw-öm ~ âv-č-öm* “(that) I come”, *pâ* “come!” (plural *pâwâs*); *ga- “go”: *garôt* “I went”, *gâme* “I go”, *gâm* “(that) I go”, *ĝû* “go!” (plural *ĝâs*); *nê- “take”: *nêrôôm* “I took”, *nême* “I take”, *nêm* “(that) I take”, *pnê* “take!” (plural not recorded); * tôm* “I gave” (* tôtâ* “he gave”), *dêm* “I give”, *(b)dên* “(that) I give”, *bdê* “give!”. Rather marginal in Aleppo Domari are the formatives -l- and -p- for the subjunctive. The former was only recorded twice with the verb *pi-* and *vây-* “hit”: *la-pyär* “that (s)he drinks”, *kâ l-vâ-m* “I will hit”, *kâ l-tû-â* “you will hit”; while the latter was only recorded in the imperative of * tô-dê* “give” and *nê- “take”: *pnêl* “take”, *bdê* “give!”[39] (*lpl/ undergoes voicing*).

Peculiar to Aleppo Domari (and probably to northern varieties of Domari) is the extension -št- added to the root to express progressive aspect: *qây-št-ôme* (~ *qâštôme*) “I’m eating” (eat-PROG-1s). This may be an important isogloss that distinguishes northern Domari from southern Domari, since no reference to it is made neither by Macalister nor by Matras. With stems ending in a consonant, a stressed epenthetic vowel /i/~ /i/ is added: *ân-îšt-ôme* “I’m bringing”. After the causative suffix -nâ- and the intransitiviser suffix -yâ-, an epenthetic /v/ is inserted: *vâshnâvištôme* “I’m burning (transitive)”, *quhhyâvištôme* “I’m coughing”. The subject agreement markers -ôme, -ôre, -e, -inne, -isse, -inde are the same as the copula “be”. The 3SG marker has the allomorph -âr- when bound pronouns are suffixed: *mka-št-âr-s-e* “(s)he is letting him/her” (let-PROG-SUB.3SG-OBJ.3SG-CM), *mâr-îšt-âr-s-e* “it/(s)he is killing him/her” (kill-PROG-SUB.3SG-OBJ.3SG-CM). The morpheme -e at the end is the so-called “contextualising marker” (see below). The verb *kar-* “do” inflects as follows (*îl/ drops, most probably to avoid a heavy three consonant cluster):

<p>| | | |</p>

Table 10: Progressive of *kar-* “do”

[39]Interestingly, the formative *l- is quite frequent in Patkanoff’s material (Patkanoff 1907/1908: 260-261): *láfrynâm* “(that) I buy” (Aleppo *fîknâm*, *lipâr* “buy!” (Aleppo *pâr*). It was also recorded more systematically in the Domari dialect of Beirut.
When associated with negation, the progressive form of the verb can also convey a volitive meaning: *nə-qāy-št-ūme* “I don’t want to eat” (NEG-eat-PROG-1SG), *nə-pi-št-ūme kulka* “I don’t want to drink anything” (NEG-drink-PROG-1SG anything), *n-ɡā-šte kəri* “(s)he doesn’t want to go home” (NEG-go-PROG.3SG).

### 3.2 Complex verbs

Aleppo Domari is not very eccentric as far as complex verbs are concerned as it exhibits patterns widely attested in neighbouring languages.\(^{40}\) That is the use of a light verb that carries morphosyntactic information added to an invariable lexical element that plays the role of semantic nucleus. There seems to be only two light verbs in Domari: *h*- “become” and *kar*- “do”. Interestingly, this is a commonality with Kurdish (and other neighbouring languages) which also possesses the two light verbs *kirin* “do” and *bûn* “be, become” (Haig 2007:174). The verbs *h*- and *kar-* respectively inflect as follow for the perfective, imperfective and subjunctive:

Table 12: Inflections of *kar-* “do”

Of non-Arabic origin, the corpus provides only two items: *amiš h-* “go down” and *ḡirsā h-* “to marry\(^{41}\)”. Arabic elements integrated into Domari through the use of *h*- are very easy to find. This is thus a very productive device to expand the lexicon. Examples are *iš h-* “live” (Arabic *y-*)

---

\(^{40}\)See Wohlgemuth (2009:102-117) for a cross-linguistic account of the light verb strategy.

\(^{41}\)Aleppo Domari possesses two different expressions for “marry”, depending on gender: when addressing a woman, *manas kar-* (lit. “make husband”) can be employed, while the verb *ḡirsā h-* can be used invariably when addressing both a man or a woman.

*Linguistic Discovery* 10.2:1-52
ğiş “he lives”), fømm h- “understand” (Arabic yi-țham “he understands”), ltaqî h- “meet” (Arabic yi-ltaqî “he meets”), ballîsh h- “start” (Arabic y-ballîsh “he starts”), zûr h- “visit” (Arabic y-zûr “he visits”), sâfîr h- “travel” (Arabic y-sâfîr “he travels”), giš h- “be away” (Arabic y-giš “he is away”), wâdîf h- “perform one’s ablutions” (Arabic yitwâdîf “he performs his ablutions”), dûr h- “go round” (Arabic y-dûr “he goes round”). Two other verbs that were recorded only in the imperative and whose etymology is still obscure ought to be mentioned: mätîl (h)îti “lean!” and hass (h)îti “shut up!” As mentioned above, the consonant /h/ is highly unstable in Aleppo Domari and surfaces only in very careful speech. This is apparent in the verb fømm h- in which the consonant /m/ also undergoes compensatory gemination because of the elision of /h/: fømm → fømm. The initial /h/ of the light verb is also elided, as shown in the following example: tō fømm ôē gâl? “Do you understand what I’m saying?” (you understand.IMPFV.2SG speech).

There are two reasons to consider that the light verb and the semantic nucleus are two separate words. The first reason pertains to prosody and the second is morphosyntactical. As far as prosody is concerned, the two elements are two distinct phonological words because they both carry primary stress: kâ giš (h)îčóm “I will be away” (FUT travel.SUBJ.1SG). Morphosyntactically, evidence for the non-integration of the two elements into one unit is provided by negation. There are two negation prefixes: n- and m-. The prefix m- is restricted to the negation of the imperative and subjunctive, whereas n- serves in all other contexts. With simple verbs, both prefixes attach to the right of the verbal word. With complex verbs, they attach to the right of the light verb, suggesting that there is no structural integration between the two elements: tîq n-ôme “I can’t stand ~ I hate” (< tîq h- “stand”), z’ôl m-ôti “don’t be angry” (< z’ôl h- “be angry”).

The other light verb attested in Aleppo Domari is kar- “do”. Complex verbs involving inherited elements are easier to find than with h-: akki kar- “wait” (akki “eye”), giš kar- “speak” (giš “tongue”), mangiš kar- “beg” (mangiš “ask”), lagiš kar- “quarrel” (lagiš “quarrel”), kâm kar- “work” (kâm “work”). As with h-, integration of Arabic elements is also very common with kar-: šaddiq kar- “believe” (Arabic y-šaddiq “he believes”), mdaḥ kar- “praise” (Arabic yi-mdâḥ “he praises”), dîš kar- “push” (Arabic yi-dîš “he pushes”), sakkir kar- “close” (Arabic y-sakkir “he closes”). These examples suggest that the imperfective stem of Arabic verbs is used for their integration into Domari. Here also phonological and morphosyntactical arguments tend to conclude that the light verb and the lexical element do not form one single unit. Examples involving the negation marker n- are: hass nô-karme “I don’t like”, lvâ n-karme “I don’t open”, šaddîq nô-karmare “I don’t believe you”. Surprisingly enough, it was not conclusive with the marker m- and the verb giš kar- “speak”: ma-giš kar! “don’t speak!”

More elicitation is here needed to test each verb with both markers n- and m-. It is still partially unclear on what line Arabic verbs are integrated as the choice of kar- or h- does not seem to be motivated by bare transitivity. All kar- verbs are indeed transitive, but so are many h- verbs: šakkər (h)rōs-əṁ “he thanked me”. One possible explanation is the degree of transitivity of the loan verb and the semantic role of the object. One such a scale is provided in Tsunoda (1985:388): (1) direct effect on patient, (2) perception, (3) pursuit, (4) knowledge, (5) feeling, (6) relationship, (7) ability. Further evidence of this is provided by the pair xsîr h- (< Arabic xsîr) and dâyya’ kar- (< Arabic dâyya) which both mean “lose”. In Arabic, these verbs are not exactly interchangeable and there is a slight semantic contrast: xsîr maṣârî “he lost money (in a transaction)” vs. dâyya’ maṣârî

Linguistic Discovery 10.2:1-52
“he lost money (while walking or forgot it somewhere)”. Beyond this semantic contrast and while the two verbs are obviously transitive, they also exhibit a difference that pertains to the degree of transitivity: ḥisir can have an object, whereas āyya must have an object. This may explain why ḥisir is borrowed into Domari through h-, and āyya through kar-. On the whole, the light verb strategy is a very convenient way of integrating new lexical elements into the language. This strategy is so productive that it seems sometimes to be employed in an ad hoc manner to create new verbs that may not be part of the lexicon, as suggested by the following example: tō xib karōr ānal-ōm “you disappointed me” (2SG disappoint do.PVF.2SG hope-1SG). This is an extreme case of replication from the Arabic idiom xayyabt ānal-i “you disappointed me” involving the verb xayyab “disappoint”, a causative derivation of the triconsonantal root x-yyb “to fail” and the noun ānal “hope”. The idiom xayyabt ānal-i thus literally means “you made my hope go wrong”. When replicating this idiom into Domari, the speaker retrieved from Arabic the imperfective stem of the non-causative form xib (y-xAB “it goes wrong”; 3SG-go.wrong.IMPVF) to which he added the light verb kar-, used most commonly to integrate verbs that locate high on the transitivity scale. The noun ānal “hope” was also copied as such.

### 3.3 Valency changing morphology

In the current state of knowledge, Aleppo Domari, like Palestinian Domari (Matras 1999:28) has two valency adjustment suffixes: one increasing, labelled here “causative suffix”, and one decreasing, labelled here “passive suffix”. These suffixes appear right after the lexical root. The main allomorph of the causative suffix is -nā: qāy- “eat” vs. qāy-nā “feed”, dāk- “see” vs. dāk-nā “show”, bī- “fear” vs. bī-nā “frighten”, rū- “cry” vs. rōw-nā “make cry”, rās- “arrive” vs. rās-nā “make arrive, bring”, vēs- “sit” vs. vēs-nā “make sit”, sōk- “learn” vs. sōk-nā “teach”. These verbs select the formative -rd- in the perfective: bī-nā-rd-ēnd “they frightened”, dāk-nā-rd-ā “he showed”. Imperfective subject agreement markers attach directly after the causative suffix: vēs-nā-r-e “(s)he makes sit”. The subjunctive stem is the same as the imperfective and the subjunctive suffix -ē is never inserted: kā rās-nā-m-ē “I’ll drive you back” (FUT arrive-CAUS-SUB.1SG-OBJ.2SG). As mentioned above, an epenthetic /l/ is added between the causative suffix and vowel initial morphological material that appears to the right, in order to avoid hiatus: dāk-nā-t-ēshē “(s)he’s showing”. The other allomorph of the causative suffix recorded is -ā and seems to be restricted to complex verbs formed with kar-. Only one instance was found in the corpus with the verb zīvrā kar- “forget” whose causative is zīvrā kar-ā- “make forget”. The extension /rd/ is selected in the perfective: zīvrā kar-ā-rd-ōs-ōs “(s)he made him/her forget it” (forget make-CAUS-PVF-SUB.3SG-OBJ.3SG). In the imperfective, the subject agreement marker normally attaches to the right of the causative suffix: zīvrā kar-ā-r-m-ē “it makes me forget” (forget make-CAUS-SUB.3SG-OBJ.1SG-CM). No instances of subjunctive were recorded. The allomorph -rā- was recorded once in the verb pērā- “bring back”, probably derived from pā “come” or par “return”. The causative suffix -nā- was also recorded once in a loan verb from Arabic: quṣṣ-nā- “cut” (= Arabic y-quṣṣ “he cuts”). This strategy to integrate (transitive) loan verbs into Domari does not seem to be productive anymore since the most common one appears to be the light verb strategy (see above).
The passive suffix has two main allomorphs: -\( i \) in the perfective and -\( y\( a \) \) in the imperfective. The productivity of the passive derivation cannot be assessed with certainty as it was only tested from Arabic items, a language that behaves quite different from European languages in which passives are quite common. Recorded items are \( d\( o\)h- “wash” vs. \( d\( o\)m\( \ddot{\iota} \) “be washed”, \( qa\( \ddot{t} \)h- “steal” vs. \( qa\( \ddot{t} \)\( \ddot{t} \)h “be stolen”, \( g\( \ddot{\iota} \)n “know” vs. \( g\( \ddot{\iota} \)n\( \ddot{\iota} \) “be known”, \( f\( \ddot{k} \)\( \ddot{n} \) “sell” vs. \( f\( \ddot{k}n\( \ddot{\iota} \) “be sold”. The scope of this suffix goes beyond bare passivisation and it can act also as an intransitiviser: \( c\( \ddot{\alpha} \)r- “hide (transitive)” vs. \( c\( \ddot{\alpha} \)r “hide (intransitive)”. The perfective selects the extension \( -r \)-: \( qa\( \ddot{t} \)\( \ddot{t} \)r\( \ddot{\iota} \) “it was stolen”, \( g\( \ddot{\iota} \)n\( \ddot{\iota} \) “it’s known”. In the imperfective, the passive suffix takes the shape \( -y\( a \)-, to which subject agreement markers attach: \( c\( \ddot{\alpha} \)r-y\( a \)-m-e “I hide (intransitive)” (hide-PASS-1SG-CM). In the subjunctive, the suffix \( -\ddot{\alpha} \)- is inserted between the passive marker and the subject agreement morpheme: \( k\ddot{\alpha} c\ddot{\alpha}\ddot{\iota}r-y\( a \)-\( \ddot{\alpha} \)-m-e “I’m going to hide” (FUT hide-PASS-SUBJ-1SG). The passive suffix \( -y\( a \)- was also recorded once in the loan verb \( qu\ddot{h}h-y\( a \)- “cough” (< Arabic \( y\)-\( q\ddot{h}h \) “he coughs”). This parallels the use of causative \( -n\ddot{\iota} \)- to integrate transitive verbs into Domari lexicon and suggests that at some point the integration of foreign elements could be made through the suffixation \( -n\ddot{\iota} \)- for transitive verbs and \( -y\( a \)- for intransitive verbs. The paucity of data does not allow much speculation about the exact status of this strategy in comparison to the light verb strategy.

Valency changing operations on complex verbs involves the permutation of the light verb: the causativisation of a \( h \)- verb leads to the replacement of \( h \)- by \( k\( \ddot{\alpha} \)r- and the passivisation of \( k\( \ddot{\alpha} \)r- verbs leads to the replacement of \( k\( \ddot{\alpha} \)r- by \( h \)-: \( z\ddot{\iota}r\ddot{\iota} k\ddot{\alpha}r “forget” vs. \( z\ddot{\iota}r\ddot{\iota} h “be forgotten”, \( a\)\( m\ddot{\iota} \)h “go down” vs. \( a\)\( m\ddot{\iota} k\ddot{\alpha}r “bring down”. While the causative derivation was recorded with a \( k\( \ddot{\alpha} \)r- verb (\( z\ddot{\iota}r\ddot{\iota} k\ddot{\alpha}r “make forget”), no \( h \)- verb was recorded with a passive derivation. Although this cannot be ruled out on pure formal grounds (some \( h \)- verbs are transitive), it is however not attested in the collected lexicon.

3.4 Tense

The rightmost slot of the Domari verb can be occupied by what Matras (1999:30) calls the “contextualisation marker” and the “de-contextualising remoteness marker” (respectively in Palestinian Domari -\( i \) and -\( a \)). He further notes that the former figures in the present (here labelled imperfective), and in the perfect (here labelled perfective), noting that “its function is the actualisation of an action or its result within the currently activated context of the speech event”. In Aleppo Domari, the contextualisation marker is realised -\( e \) and denotes a general or habitual present when it marks the imperfective stem, as shown in (30).

(30) a. \( s\ddot{\iota}b\ddot{\iota}n-t\ddot{\iota} \) py\( \dot{\iota}n -e \) q\( \dot{\iota}h\ddot{w}a \)
    morning-OBL.PL-SUP drink.IMPFV.1PL-CM coffee
    “In the morning we drink coffee”

\[42\]Surprisingly, this verb cannot have been borrowed from Aleppo Arabic in which the form \( y\ddot{i} -s\ddot{\iota}’u\ddot{l} \) is used instead of \( y\)-\( q\ddot{h}h \). This latter presumably occurs in the surrounding rural varieties.
b. *qtor*-e **tambūr-*ē*-tā** **bkēz**

play.IMPFV.3SG-CM  oud-OBL-SUP  well

“He plays oud (traditional instrument) well”

When the contextualising marker attaches to the perfective stem, it denotes a perfect, as shown by the following pair: *pi*-r-*ōm* “I drank” (drink-PFV-1SG) vs. *pi*-r-*ōm*-e “I’ve drunk = as I speak, I’ve drunk” (drink-PFV-1SG-CM), *vēs*-r-*ōm* “I stayed” (stay-PFV-1SG) vs. *vēs*-r-*ōm*-e “I’m settled, I live” (stay-PFV-1SG-CM). In the 3SG, the marker -e simply replaces the perfective marker -ā. *pūr*-ā “he drank” vs. *pūr*-e “he has drunk”.

As for the remoteness marker, Matras describes it as a device “to emphasize the demarcation between the action conveyed by the verb, and the currently activated speech context” (Matras 1999:30). Aleppo Domari has two allomorphs that seem to be in free variation: -a (also realised -ā) and -āši. The latter is strikingly similar to the reconstructed proto-Romani remoteness marker -as(i) (Matras 2002:154). It can attach to the imperfective stem (31a), denoting most prototypically a habitual past; to the progressive stem (31b), denoting a progressive past; to the perfective stem (30c), denoting a pluperfect. Surprisingly, the remoteness marker was also recorded after the subjunctive stem (31d). This last option, as far as documented, seems impossible in Palestinian Domari.

(31) a. *gān*-om-ā **trōtāl** ***lāftī-ā*** **nāč-oš-āshī** **māṣrī** **xor-kērā**

know-1SG-RM  small  girl-INDEF  dance-3SG-RM  money for

“I knew a girl (who) would dance for money”

b. *gīb** **ka-št-ā** **vāšyān**

language  do-PROG.3SG-RM  COM.3PL

“(S)he was speaking with them”

c. *qabās*-mā **rāštoḥ** **kōry-ś-ki** **kānd-ā**

before  arrive.SUBJ.1PL  house-OBL-ABL  leave.PFV.3SG-RM

“Before we got back home, (s)he had left”

d. *kā** **sāfār (h)ōṃ-ā** **ē** **ṭrōn** **nār-ś-śa** **uṭār-ś-ki**

FUT  travel.SUBJ.1SG-RM  this.OBL  three  man-OBL-COM  town-OBL-ABL

“I wanted to go to town with these three men”

Overall, the morphological structure of the verbal word in Aleppo Domari is the same as in Palestinian Domari as described by Matras (1999:29): stem - derivation - aspect/mood - subject - object - tense, although there are significant differences as far as forms are concerned.

### 3.5 Modality

The expression of modality in Aleppo Domari does not differ greatly from what can be found in Palestinian Domari. Two inherited roots survived: *sāk*- “can, be able” (< Old Indo-Aryan *śākya*...
“possible”) and mang- “ask, want” (< Old Indo-Aryan mārgana “asking”). The verb sāk- inflects as follows in the perfective and imperfective (no subjunctive was recorded):

<table>
<thead>
<tr>
<th></th>
<th>Imperfective</th>
<th>Perfective</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.SG.</td>
<td>sāk-əme</td>
<td>sāk-ərd-əm</td>
</tr>
<tr>
<td>2.SG.</td>
<td>sāk-ə</td>
<td>sāk-ərd-ər</td>
</tr>
<tr>
<td>3.SG.</td>
<td>sāk-ərə</td>
<td>sāk-ərd-ə</td>
</tr>
<tr>
<td>1.PL.</td>
<td>sāk-əne</td>
<td>sāk-ərd-ən</td>
</tr>
<tr>
<td>2.PL.</td>
<td>sāk-əse</td>
<td>sāk-ərd-əs</td>
</tr>
<tr>
<td>3.PL.</td>
<td>sāk-ənde</td>
<td>sāk-ərd-ənd</td>
</tr>
</tbody>
</table>

Table 13: Inflections of sāk- “be able”

As shown above, the perfective selects the extension -rd-, unlike Palestinian Domari which exhibits -r-. The semantic scope of sāk- is rather large and it may be used to express possibility, capacity and permission. When complemented by a clause, the verb in the subordinate clause is always in the subjunctive: n-sākme skəəm “I can’t study” (NEG-be.able.IMPFV.1SG study.SUBJ.1SG). Another way of expressing capacity/possibility is to use the verb h- “become”: n-(h)əre əs dəwət-ə-ki “You (PL.) can’t go to the wedding” (NEG-become.IMPFV.3SG go.SUBJ.2PL wedding-OBL-ABL). This use of the verb “become” to express possibility is actually quite common in the languages of the area. The verb mang-inflects as follows in the the perfective, imperfective and subjunctive:

<table>
<thead>
<tr>
<th></th>
<th>Perfective</th>
<th>Imperfective</th>
<th>Subjunctive</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.SG.</td>
<td>mangə-ərd-əm</td>
<td>mangəne</td>
<td>mangə-əm</td>
</tr>
<tr>
<td>2.SG.</td>
<td>mangə-ərd-ər</td>
<td>mangə</td>
<td>mangə-ər</td>
</tr>
<tr>
<td>3.SG.</td>
<td>mangə-ərd-ə</td>
<td>mangəre</td>
<td>mangə-ər</td>
</tr>
<tr>
<td>1.PL.</td>
<td>mangə-ərd-ən</td>
<td>mangəne</td>
<td>mangə-ən</td>
</tr>
<tr>
<td>2.PL.</td>
<td>mangə-ərd-əs</td>
<td>mangəse</td>
<td>mangə-əs</td>
</tr>
<tr>
<td>3.PL.</td>
<td>mangə-ərd-ənd</td>
<td>mangənde</td>
<td>mangə-ənd</td>
</tr>
</tbody>
</table>

Table 14: Inflections of mang- “ask”

Like sāk-, the verb mang- selects the extension -rd- in the perfective, and -ə- in the subjunctive. The original meaning of the root “ask, require” was kept as the primary meaning in Domari: na-sākərdə mangə or diəm maşrî “(s)he couldn’t ask me for some money” (NEG-can.IMPFV.3SG ask.SUBJ.3SG ABL.1SG money). When followed by a subordinate clause, mang- is closer to a control verb. The verb of the subordinate clause appears in the subjunctive: mangərəm ədi kənər kəry-ə-ki “I asked him to leave the house” (ask.PFV.1SG ABL.1SG go.out.SUBJ.3SG house-ABL-ABL). The expression of volition was recorded a couple of times with the imperfective stem of the verb mang-: mangəme abər ərəm mişrən ən şəbə “I wish to give you

43 Matras (1999:33) gives the following forms: sakami/sakarəm “I can/could”.
44 Cf. Arabic mā bišir (NEG become.IMPFV.3SG) or (colloquial) Persian ne-mišə (NEG-become.IMPFV.3SG) that both mean “it’s not possible”.

Linguistic Discovery 10.2:1-52
back the money tomorrow” (ask.IMPFV.1SG for.2SG return.SUBJ.1SG money-ACC.PL tomorrow). Very common, though, in Aleppo Domari is the progressive root of mang- to express desire: mangištôme pâni “I want water” (ask.PROG.1SG water). Its use may also extend to cases in which one would expect the future marker kâ, that is when the main clause and the subordinate clause share the same subject: mangištôme hôtær zangil “he wants to become rich” (ask.PROG.3SG become.SUBJ.3SG rich). When the subject is not shared, the use of kâ is impossible and the progressive form of mang- is the only option: mangištôme gâr “I want him to go” (ask.PROG.1SG go.SUBJ.3SG). The paucity of data does not allow any conclusive statement but it seems that the extension of the progressive form of mang- to contexts so far reserved to kâ may be a sign of language change, most probably triggered by contact. Indeed, one may suppose that the use in Levantine Arabic of one single inflected morpheme (bidd-) for both same-subject and different-subject in ‘want’ complements prompts innovative speakers of Aleppo Domari to replicate the use pattern found in Arabic, drawing on an existing structure (the progressive of mang-). Besides the two inherited roots sâk- and mang-, Aleppo Domari makes extensive use of Arabic borrowed morphemes to express obligation and possibility: lâzim “must”, gîbâri “obliged”, yimkin ~ balki “maybe”. Except for lâzim, these are best interpreted as predicate modifying adverbs because they do not trigger the use of the subjunctive. Compare for that matter: lâzim kantâm “I must leave” (must leave.SUBJ.1SG), vs yimkin gâne vyâr “I may go to town” (maybe go.IMPFV.1SG town).

3.6 The future marker kâ

The morpheme kâ (glossed here FUT) appears as a preverbal modifier. Its primary meaning is volitive (32a) and it is always followed by the subjunctive form of the verb. The volitive meaning has been extended to future reference (32b).

(32) a. kâ pchâm-øs ksê (ê) hânî kardo
FUT ask.SUBJ.1SG-3SG why so do.PFV.3SG
“I want to ask him why he did this”

   b. tikâ di kâ hître o pâsîm moørî
few two FUT become.SUBJ.3SG AD.1SG money
“Soon enough, I’ll have money”

Etymologically, kâ seems to be the grammaticalised form of the root kâr- “want” whose inflection was recorded as follow: kärme “I want”, kärre “you want”, kârse “(s)he wants”, kārmâne “we want”, kârrâne “you (PL.) want”, kârsâne “they want”. It can behave like a transitive verb: amin kârmâne sikâra “we want a cigarette” (we want.1PL cigarette); or a modal auxiliary: kârsâne pyind pâni “they want to drink water” (want.3PL drink.SUBJ.3PL water). It is of course this latter usage that must have given rise to the invariable form kâ. It is still unclear where this form comes from as it appears to be morphologically half way through between a verb and a noun. As a noun, one would have expected the number suffix -ø (or -ê) between the root and the bound pronoun *kâr-ô-me. The form kâr-m-e is morphologically compatible with a verb,
as kär- would be the root, -m- the 1SG subject agreement marker, and -e the contextualising marker. This, however, does not hold true anymore for the plural forms kär-män-e, kär-rän-e, kar-sän-e, in which the morphemes -män-, -rän- and -sän- are obviously the plural forms of the object/possessive bound pronouns. The last element -e would then have to be interpreted as the 3SG copula and a form like kär-män-e would then mean something close to “our desire is”. This would be very similar to the morphosyntactical uncertainty around the Levantine Arabic pseudo-verb bidd-, which exhibits nominal properties as well as verbal properties, hence its classification as a pseudo-verb. Although kā is the outcome of the grammaticalisation of kär- into a future tense marker through erosion, it did not turn into a bound morpheme and remains an independent word. This is evidenced by the fact that although kā is placed most often to the left of the verb, material can be inserted between kā and the verbal word: kā toktōr (h)očom “I’ll become a doctor”. The same holds with negation, the morpheme m- is prefixed to the verb, not to kā: kā ma-končom “I will not go out” (FUT NEG-go.out.SUBJ.1SG). With complex verbs, kā appears also to the left: kā sakkir karom šibbāk-ēs “I’ll close the window” (FUT close.SUBJ.1SG window-ACC), kā (a)mīš (h)očom vyār “I’ll go down to the market” (FUT go.down.SUBJ.1SG market). The marker kā is formally very similar to the future tense marker found in many Balkan dialects of Romani. Romani ka is usually seen as the outcome of the grammaticalisation of the root kam- “want”, under the influence of Balkan languages in which future tense markers commonly originate from the verb “want”\(^4\). Aleppo Domari obviously underwent the same process, as shown above: the root kär- “want” grammaticalised into a future tense marker. It is most likely that the development of Domari kär- and Romani kam- into ka are two separate developments. As hinted above, models for such a contact-induced grammaticalisation in the case of Aleppo Domari is readily available in Levantine Arabic, in which the pseudo-verb bidd- “want” is often used as an auxiliary to denote future reference. Moreover, while the etymology of Romani kam- is rather straightforward (< Indo-Aryan kāma “wish, love, sexual love”), it is still unclear what the exact etymology of Domari kär- is.

4. Non-Verbal Predication and Related Constructions

4.1 The copula

Aleppo Domari makes use of the root št- “be” in non-verbal predication (except in the 3SG, see below). The subject agreement marker -ōm, -ār, -e (or ∅ depending on the analysis), -inn, -iss, -ind are followed by the contextualising marker -e, denoting present tense, or the remoteness marker -ā(ši), denoting past tense:

\(^4\)Matras (2002:157-158). See also Boretzky (2003:68). Syntactically, it behaves, differently though, as the negation marker is placed before ka: na ka kerel “he will not do” (Boretzky 2003:68).
Table 15: The Copula št- “be”

<table>
<thead>
<tr>
<th></th>
<th>Present</th>
<th>Past</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.SG.</td>
<td>št-ōm-e</td>
<td>št-ōm-ā(ši)</td>
</tr>
<tr>
<td>2.SG.</td>
<td>št-ōr-e</td>
<td>št-ōr-ā(ši)</td>
</tr>
<tr>
<td>3.SG.</td>
<td>-e</td>
<td>-ā(ši)</td>
</tr>
<tr>
<td>1.PL.</td>
<td>št-inn-e</td>
<td>št-inn-ā(ši)</td>
</tr>
<tr>
<td>2.PL.</td>
<td>št-iss-e</td>
<td>št-iss-ā(ši)</td>
</tr>
<tr>
<td>3.PL.</td>
<td>št-ind-e</td>
<td>št-ind-ā(ši)</td>
</tr>
</tbody>
</table>

The root št- is often reduced to š- in the plural forms and one will most often hear š-inn-, š-iss- and š-ind-. In the speech of one informant, the root št- also dropped in the 2PL: tmārin ētā = isse “you (PL.) are here”, ēta nisse “you (PL.) are not here”. After a vowel, an epenthetic /y/ is inserted between the predicate and 3SG -e: ētā = ye “he’s here”. Plural agreement is most conspicuous with animate referents: mām-ōm čāgin zangīl = āštinde “my cousins are rich” (uncle-1SG children rich=COP.3PL). With inanimate referents, singular agreement is frequent: ē dy-o-ki kory-ē-s sā pnār=e “all the houses of this village are white” (DEM.OBL village-OBL-ABL house-PL-3SG all white=COP.3SG). Future reference is expressed with the subjunctive stem of the root h- “become”: ʃōbā tō kory-ē-m kā hōčā “tomorrow you’ll be home” (tomorrow you house-OBL-IN FUT become.SUBJ.2SG). The future marker kā is optional: ʃōbā kory-ē-m (h)ōčam “tomorrow I’ll be home” (tomorrow house-OBL-IN become.SUBJ.1SG). Syntactically, as shown in the examples above, the copula always appears right after the predicate. After a consonant, a stressed epenthetic /i/ is inserted between the predicate and the copula: gāy-āštome “I’m fine”.

4.2 Existential and possessive constructions

Existential clauses in Aleppo Domari are introduced by way of the morpheme aštī “there is”, as exemplified in (33a). The remoteness marker -ā(ši) is suffixed to aštī to denote past reference (33b).

(33) a. pāny-ə-m wāṭ aštī  
water-OBL-IN stone there.is  
“There is a stone in the water”

b. bū ammat ašt-āši uyār-ə-mā  
many people there.is-RM market-OBL-IN  
“There were many people at the market”

Domari, like Arabic and Kurdish, does not have at its disposal a verb in predicative possessive constructions. For this purpose, it uses the same morpheme as existential clauses. It is therefore more convincing to consider possessive clauses in Domari an extension of existential clauses. These are non-verbal clauses involving two NP’s. The possessed entity fills the one-place
argument of the existential predicate, whereas the possessor appears as an NP marked as an oblique and is encoded by way of adessive marking or comitative marking. The oblique NP is marked for adessive to express general possession, while comitative marking is restricted to cases when there is direct or physical contact between the possessor and the possessee. The clause may be introduced by the existential morpheme \( aštī \) (34a), or the copula cliticises to the NP encoding the possessee (34b, c). Whether the possessor is a proform or a full NP, two patterns are found: direct case marking on the phrase encoding the possessor (34a, b, e), or the use of a preposition-like morpheme coreferencing the possessor (34c, d). Note that redundancy in first person marking in (34e) is triggered by the kinship term \( bāb \) “father”.

\[
(34) \quad \begin{align*}
\text{a. } & bār-ē-m-ka \quad aštī \quad kōry-ā \quad drōngā \\
& \text{brother-PL-1SG-AD there.is house-INDEF big} \\
& \text{“My brothers have a big house”} \\
\text{b. } & amin-ka \quad trombil = e \\
& 1PL-AD \quad \text{car=COP} \\
& \text{“We have a car”} \\
\text{c. } & qər-ə-ki \quad dād-ōs \quad pāsī \quad ġuštōry-ā \quad bkēz = e \\
& \text{boy-OBL-ABL mother-3SG AD.3SG ring-INDEF nice=COP} \\
& \text{“The boy’s mother has a nice ring”} \\
\text{d. } & kānye \quad vāšōm \quad məʃrī \\
& \text{there.is.not COM.1SG money} \\
& \text{“I don’t have money (with me)”} \\
\text{e. } & mā-ki \quad bāb-ōm-sa \quad kačapā \quad aštī \quad məʃrī \\
& 1SG-ABL \text{ father-1SG-COM always there.is money} \\
& \text{“My father always has money (with him)”}
\end{align*}
\]

Such a variety of patterns is best explained by contact. The syntax of possessive constructions in Aleppo Domari closely resembles what is found in Kurdish, in which the possessor appears in the oblique case, and the possessee is encoded as the one-place argument of an existential clause, whereas the semantics are obviously replicated from Arabic where comitative marking is used for direct contact and adessive for general possession.

5. Negation Strategies

The main morpheme used to mark negation in the dialect of Aleppo is the prefix \( n- \). It attaches to the verbal word: \( n-dakōrdōs-əm \) “he didn’t see me”. A peculiarity appears with the tense markers -ē and -ā(šī) which receive stress when \( n- \) is prefixed. Compare ġān-ēm-ē “I know” vs. \( n-ğān-m-ē \) “I don’t know”; mangōštōre “you want” vs. \( n-mangōštōrē \) “you don’t want”. Palestinian Domari exhibits a similar pattern with a stressed final element -ē’ in the imperfective (Matras 1999:31):
The Domari Language of Aleppo

Linguistic Discovery 10.2:1-52

*mangamsani* “I like them” vs. *(i)*mangamsane* “I don’t like them”. Initial *n*- may drop and *-ə* alone suffices to mark negation: *piyame* “I don’t drink”. This is unattested in Aleppo Domari where *n*- never drops. It is premature to say which of Aleppo Domari or Palestinian Domari innovated as far as the final glottal stop is concerned. Aleppo Domari may have lost it, or it arose as an epenthetic element in Palestinian Domari, possibly to compensate the loss of initial *n*. As mentioned above, in complex verbs, the negation marker is normally carried by the light verb: *luва n-karме* “I don’t open”. The prefix *m*- is restricted to the imperative and the subjunctive: *mə-xax́ti* “don’t laugh!”; *mə-vāy-əm* “don’t hit me!” . In the subjunctive, the prefix *m*- is also selected: *kā mə-kəṉę́m* “I will not go out” (FUT NEG-go.out.SUBJ.1SG). With complex verbs, *m*- was recorded prefixed to the light verb *zəl m-(h)əti* “don’t be upset!” , and to the left bound of the verbal phrase: *mə-𝑔ib kar* “don’t speak!” . The copula is normally negated with *n*- and stress expectedly falls on the contextualising marker: *tō ęta n-išṯər-ę* “You are not here”. In the 3SG, a geminated form was recorded: *di dūr ənonny-ę* “the village is not far away” (village far NEG.COP.3SG-CM), *ęta ənonny-əşi* “he was not here” (here NEG.COP.3SG-RM). In existential constructions, the morpheme *kānyę́* “there is not” is used: *kānyę́ zāv-r-əs-mā dā́nd “there is no tooth in his mouth” (there.is.not mouth-3SG-IN tooth), kānyę́ pāsi bār “(s)he doesn’t have any brother” (there.is.not AD.3SG brother), *kānyę́ vāšöm məşrī bū ısəm* “I don’t have much money right now” (there.is.not COM.3SG money much now). There are other morphemes linked to negation such as the indefinites *kwāmör* “anybody” and *kyāmör* “anything”: *kyāmör nə-hrā “nothing happened*. The form *kwāmörə́n* “nobody” was also recorded once: *kwāmörə́n nə-sonḏös-əm* “nobody heard me”. Interestingly, the unmarked form *kāmör* can be used for both “anything” and “anybody”: *kāmör nə-tōs-əm məşrī* “nobody gave me money” (nobody NEG-give.PFV.3SG-1SG money), *nə-mānə́ pāsəm kāmör bdə́m-ar iyyā* “I don’t have anything left to give you” (NEG-remain.PFV.3SG.COM.1SG anything give.SUBJ.1SG-2SG OBJ.3SG). In object position, also frequent is the form *kulka* “nothing”: *kulka n-karre* “he doesn’t do anything” (nothing NEG-do.IMPVF.3SG). The Arabic negator *mā* was never recorded. The only negational morpheme borrowed from Arabic is *wala*. It appears in Domari only as a nominal modifier and seems to compete with the suffix -*mōr* (see 2.16.). In Arabic, *wala* is also used in contrastive negative coordination (*lā…wala “neither…nor”*). In such constructions, Aleppo Domari employs *nə-…nə-: n-amā nə-bēn-əm* “Neither me nor my sister”, *nə-hnū nə-bār-əs “neither him nor his brother”.

6. Remarks about Complex Sentences

Aleppo Domari draws on both internal and external resources as far as clause combining is concerned. Internal embedding (relativisation and complementation) involves morphemes borrowed from Arabic, whereas external embedding (adverbial clauses) makes use of Arabic, Kurdish and inherited material.

46The same variation was observed in the dialect of Sarāqib: *mə-ɡib kar* and *ɡib mə-kar* were equally accepted. The dialect of Beirut differs in this respect and generalised the marking of the leftmost position of the verbal phrase: *mə-zəl (h)əti* “don’t be upset”. }
6.1 Internal embedding

Domari has replicated the Arabic relativisation strategy. The Arabic relativiser *illi* is used to introduce relative clauses and appears at the left of the relative clause. The relative clause is placed post-nominally. As in Arabic, *illi* is used only when the modified noun is definite. In Arabic, definition is overtly marked, mostly by way of the article *il*. This is not available in Domari, so the use of the relativiser will itself denote the definite feature of the modified noun (35a). It seems, however, that under the pressure exerted by Arabic, some speakers feel the need to overtly mark the noun for definition. One of the most predictable ways of doing this is to recruit a demonstrative (35b). The absence of relativiser indicates that the modified noun is indefinite (35c).

(35) a.  
\[ \begin{array}{cccc}
\text{gağği} & \text{illi} & \text{ği̇b kardên} & \text{vâšî} \\
\text{woman} & \text{REL} & \text{speak.PVF.1PL} & \text{COM.3SG}
\end{array} \]

“The woman we spoke with”

b.  
\[ \begin{array}{cccc}
\text{hā} & \text{tāwlâ} & \text{illi} & \text{maṭbax-ơ-m}=e \\
\text{DEM} & \text{table} & \text{REL} & \text{kitchen-OBL-IN=COP.3SG}
\end{array} \]

“The table which is in the kitchen”

c.  
\[ \begin{array}{cccc}
\text{fâm omē} & \text{har} & \text{gâlâ} & \text{ği̇b kar-r-ơs-e} \\
\text{understand.IMPFV.1SG} & \text{each} & \text{word} & \text{speak.IMPFV-SUB.3SG-OBJ.3SG-CM}
\end{array} \]

“I understand every word he says”

Languages whose main relativisation strategy is the resumptive pronoun strategy usually don’t exhibit any restrictions and all syntactic positions are eligible for relativisation (Creissels 2006, Vol. II: 216). This is the case of Arabic. Since in Domari, the relativisation strategy was replicated wholesale from Arabic, it appears that in Aleppo Domari, all syntactic roles are eligible for relativisation. It should also be added that the Iranian relativiser *ke* was recorded once:  
\[ \text{hā nām} = e \text{ ke āyrā} \] “This is the man who came” (DEM man=COP REL come.PVF.3SG).

As far as complementation is concerned, Aleppo Domari makes use of the Arabic complementiser *inno*, as shown in (36a). However, the most common strategy seems to be parataxis (36b).

(36) a.  
\[ \begin{array}{cccc}
\text{hā} & \text{ka(ģ)ğā} & \text{ğânîre} & \text{inno} & \text{zangîl}=e \\
\text{DEM} & \text{man} & \text{be.known.PVF.3SG} & \text{COMP} & \text{rich=COP.3SG}
\end{array} \]

“It is known that this man is rich”

b.  
\[ \begin{array}{cccc}
\text{snîštîme} & \text{pâni} & \text{mangištôre} \\
\text{hear.PROG.1SG} & \text{water} & \text{want.PROG.2SG}
\end{array} \]

“I hear (that) you want water”
The complementiser *innen* in Arabic often appears augmented by a bound pronoun indexing the subject of the embedded clause (*innen-* “that I”, *innen-* “that you”). This appears to be impossible in Aleppo Domari and the complementiser is always invariable.

6.2 External embedding

Adverbial clauses are mainly introduced by way of conjunctions borrowed from Arabic: *lamma* ~ *limmin* “when”, *li’anno* ~ *li’anni* “because”, *bass* “as soon as”, *qabell-mā* “before” (often reduced to *qabom*), *ba’ed-mā* “after” (realised *ba’emma*), *ahsan-mā* “in order not to”. More puzzling is the form *waxti* “when”, which ultimately comes from Arabic *waqt* “time” but which may well have been borrowed from Western Iranian: *waxti* ṣādg = ṣītām-ā “when I was a boy” (when boy=COP.1SG-RM). An interesting case of intertwining of morphemes borrowed from Arabic and Kurdish occurs in the complex conjunction *har-mā* “everytime (that)”, as exemplified in (37). The pattern was replicated from Arabic *kull-mā*, composed of *kull* “each, all” and the indefinite relativiser *mā*. Matter was taken from Kurdish *har* “each” and Arabic *-mā*.47

(37) *har-mā* xāzume hā ḥ(a)rā sā sənr-am-e (sərīme)

“Everytime I laugh, this entire neighbourhood can hear me”

To introduce purpose subordinate clauses, several options emerge. The use of the subjunctive may suffice (38a), but more often Aleppo Domari uses conjunctions borrowed from Arabic such as *mšān* “in order to” or more frequently *tā* “until, in order to” (38b). It should be noted that the form *ta* may not have been borrowed from Arabic as it is appears also in neighbouring languages. Undocumented in Domari so far is *tāke* that combines *tā* and the Iranian complementiser *ke* (38c).48

(38) a. kā ḡām dikkān-ə-kī pārm qāyiš ārāt-ə kērā

FUT go.SUBJ.1SG shop-OBL-ABL buy.SUBJ.1SG food night-OBL for

“I’ll go to the shop to buy food for the night”

b. āyrā pāsōm tā ḡib karər vāšōm

come.PVF.3SG AD.1SG to speak.SUBJ.3SG COM.1SG

“He came to my place to speak with me”

c. čāg-əs vēsnāre kirsty-ē-tā tāke qaynār-əs

kid-ACC make.sit.IMPFV.3SG chair-OBL-SUP to feed.SUBJ.3SG-3SG

“She puts the kid on the chair to feed him”

47Interestingly, in Sarāqīb Domari, *har* alone is used, whereas Beirut Domari simply uses Arabic *kull-mā*. It appears thus as a continuum from Kurdish to Arabic: *har*, *har-mā*, *kull-mā*.

48Reflexes of *tāke* are common in Iranian languages. Kurmanji exhibits *daku* “in order to”, while *tāke* is found in Persian.
Also undocumented and a bit more eccentric is the disjunction of *täke*: the formative *tä* introduces the purpose clause, and *ke* is placed right after the predicate (39a and 39b). This pattern was recorded quite a few times so it appears to be a common strategy to introduce purpose clauses in Aleppo Domari. I am not aware of anything similar in neighbouring languages.

(36) a.

“I never go to town to buy bread”

b.  
\[āyrā \ pāsōm \ tā \ dākṃər-əm \ ke\]  
come.PVF.3SG AD.1SG to see.SUBJ.3SG-1SG COMP  
“He came to my place to see me”

As far as conditional clauses are concerned, Aleppo Domari borrowed all the Arabic conjunctions. These are mainly *iza*, *law* and more marginally *lawinn* “even if”. The conjunction *iza* introduces real conditional clause, while *law* is used with unreal conditionals. The use of the perfective or the imperfective is a complex matter in Arabic grammar but it can be summarised saying that the perfective denotes a higher degree of hypotheticality. The perfective is also often used to denote punctual aspect. Since Aleppo Domari borrowed all its conjunctions from Arabic and also exhibits a split between perfective and imperfective, it is very likely that they share the same use patterns. The following sentences illustrate the use of the Arabic conjunctions. The use of the perfective in (40a) seems to suggest that the speaker places the event higher on the scale of hypotheticality. The Arabic verb *kān* “he was” is often used in both the conditional clause and in the main clause. In many varieties of Levantine Arabic, *kān* lexicalised into an uninflected counterfactual particle. It comes thus as no surprise that it was borrowed as such into Aleppo Domari (40c). The Arabic conjunction *lawinn* “even if” to which a bound pronoun indexing the subject of the subordinate clause often attaches, was also borrowed into Domari and appears invariably as *lawinn* (40d).

(40) a.  
\[iza \ āyrər \ lakaɾ-m-ər-e\]

d. \(\text{lāzim ġā ōta lawinn nō-mangištōre}\)

must go.SUBJ.2SG there even.if NEG-want.IMPVF.2SG

“You have to go there even if you don’t want to”

Besides the total replication of Arabic conditionals, it appears that Aleppo Domari had at its disposal another strategy, consisting of the attachment of \(sa\) to the right of the verb, both in the perfective (41a) and the imperfective (41b). Prosodically, \(sa\) remains unstressed: \(\text{lakordōs = sa (}<\text{lakordōr = sa)} “if you see”; \text{mangištōre = sa “if you want”}, suggesting it is best seen as a clitic.

\[
\begin{align*}
(41) \ a. \ & \text{lakordōs = sa kyāmōr ġib kar vāsōm} \\
& \text{see.PFV.2SG=if something speak.IMP COM.1SG} \\
& \text{“If you see something, speak to me”}
\end{align*}
\]

\[
\begin{align*}
& \text{b. sakē = sa pā pāsōm} \\
& \text{can.IMPVF.2SG=if come.IMP AD.1SG} \\
& \text{“If you can, come to my place”}
\end{align*}
\]

The morpheme \(sa\) in Domari is obviously a case of matter replication from the Turkish suffix -\(s\)A. In Turkish, -\(s\)A also attaches to the predicate.\(^{49}\) It should be added however, that Turkish -\(s\)A is frequently borrowed into Kurdish dialects in contact with Turkish,\(^{50}\) so it may well have been borrowed from Kurdish and not directly from Turkish. Also puzzling is the fact that \(sa\) in Aleppo Domari was only recorded in the 2SG. For other persons, only Arabic conjunctions were recorded. One may conceive that the clitisation of \(sa\) was once the main strategy. While Arabic conjunctions were making their way into Aleppo Domari, \(sa\) remained restricted to 2SG forms. It is of course unclear why the 2SG and not other persons.\(^{51}\)

The most obvious example for which Aleppo Domari draws on internal resources is the way of expressing simultaneity. The most common strategy seems to be by way of the conjunction-like complex morpheme \(hōšī\) (glossed here “as”). The verb of the subordinate clause was recorded with the progressive stem (42a) or in the imperfective (42b).

\[
\begin{align*}
(42) \ a. \ & \text{slālā (h)rā vatōmā hōšī akī kaštinne} \\
& \text{rain become.PFV.3SG SUP.1PL as wait.PROG.1PL} \\
& \text{“As we were waiting, it started to rain”}
\end{align*}
\]

\(^{49}\)This can be a verb or a copula, see Göksel & Kerslake (2005:419).

\(^{51}\)Such a restriction does not exist in the Domari dialect of Sarāqib in which \(sa\) can attach to any person. The dialect of Beirut only exhibits Arabic conjunctions.
b.  höşĩ  manderdende  āyrōs-sā  bōgary-ā
    as stand.IMPFV.3PL come.PFV.3SG-OBJ.3PL dog-INDEF
    “As they were standing, a dog came to them”

The morpheme höşĩ seems to be composed of the formatives hō and šī. The former is most probably a short form of the imperfective of the verb h- “become”, while the latter is the clitic šī “also, and”. The clitic šī is most likely to have been borrowed from Kurdish where a very similar morpheme, both in form and function is reported. In Aleppo Domari, šī attaches to the right bound of the constituent. It is used as a focus particle (43a) or to coordinate different constituents, such as verbal phrases (43b), but also clausal constituents (43c).

(43) a.  tô = šī  yēlkānī (h)rôre  dûnōm
    2SG=too alone become.PFV.2SG without.1SG
    “You too, you are lonely without me”

b.  kœçmârîn  mangônde  vēštând  kāry-ô  vâgôr
    old.PL like.IMPFV.3PL stay.SUBJ.3PL home-OBL in.front.of
    ġib karând = šī  bû
    speak.SUBJ.3PL=and much
    “Old people like to stay in front of the house and speak a lot”

c.  āyrâ  pâsôm  čărre = šī  pišt-ô  pačî  kam-ā
    come.PFV.3SG AD.1SG hide.IMPFV.3SG=and back-OBL behind thing-INDEF
    “He came to me (and was) hiding something behind his back”

Technically speaking, (43c) does not pertain to subordination but rather to coordination. Formally though, höšĩ clauses appear to be an extension of the pattern exhibited in (43c), in which two clausal constituents are coordinated with the clitic šī. It is very plausible that höšĩ clauses are in fact an instance of contact-induced grammaticalisation whereby Domari replicated what is commonly called in Arabic grammar hāl clauses. These are subordinated clauses expressing simultaneity, introduced by the coordination particle w- “and”, itself followed by a free pronoun: w ana walad “when I was a kid” (and 1SG kid). While the replication of Arabic w-through the clitic šī is rather straightforward, more puzzling is the origin of the formative hō-. It was suggested above that it may be a short form of the imperfective of the verb h- “become”. One possibility is that the Arabic free pronoun in hāl constructions was interpreted as a copula, and so replicated by way of h-. The origin of höšĩ clauses could then be explained by an extension of the clausal complements coordinated with =šī triggered by the contact-induced grammaticalisation of Arabic hāl clauses, leading to the emergence of a new subordination conjunction.

52Mokri (2003:611-612) gives the following forms: -ič / -yč / -iš / -iš, and translates it (in French) “aussi, également”.

Linguistic Discovery 10.2.1-52
7. Conclusion

Until recently, everything that was known about Domari relied on Palestinian Domari, a now moribund dialect first investigated in the beginning of last century by R.A.S. Macalister (1914) and subsequently by Yaron Matras (1999) who sketched the present state of the same dialect as spoken by the remaining community in Jerusalem. Apart from these two sources and a couple of word lists dating back from the 19th century, no description is available for other varieties. This paper aimed at filling in this gap by presenting first-hand linguistic data about an undescribed variety of Domari. The most striking feature of Aleppo Domari compared to Palestinian Domari is the loss of gender as an inflectional category. This, as shown above, had an impact on a series of paradigms. Most conspicuous is the restructuring of Layer I case marking with the generalisation of the masculine -as as a general accusative marker and feminine -a as a general oblique marker. Another category that has been restructured due to gender neutralisation is that of the demonstratives. When compared to Palestinian Domari, one notices the loss of the feminine form ɨhɨ and the reassignment of oblique forms ɨr- and ɵr- to anaphoric demonstratives. One last category on which gender neutralisation had an impact is the form of the 3SG perfective for which the masculine form was generalised (Aleppo ɡarə “(s)he went” vs. Palestinian gara “he went” - ɡarɨ “she went”). Case marking in Aleppo Domari, besides the restructuring of Layer I markers, does not exhibit any eccentric idiosyncrasy. Layer II markers show important differences both in forms and functions. While in all documented varieties, the ablative marker -ki extended to a prepositional case, Aleppo Domari also further extended it to what may be called a motative marker, encoding not only origin but also destination. Such a development makes it difficult to keep the term ‘ablative’ to designate the marker -ki. Undocumented so far was the versative marker -ʋa “towards”, used in Aleppo, and in the dialects of Saraqib and Beirut. Aleppo Domari stands apart, allocating of a set of relational nouns expressing mainly spatial relations (benefactive -kərə being an exception). Diachronically, these relational nouns are also good candidates for the emergence of Layer II markers, through erosion and structural integration to the modified noun. The appearance of the oblique marker in such constructions indicates that the oblique marker in Aleppo Domari partially kept its original function of genitive marker (Matras 2002:174). This is apparent in phrases like dəm-ə giḥ “the language of the Dəm” (Dəm-OBL language), halab-ə dəm “the Dəm of Aleppo” (Aleppo-OBL Dəm). Also peculiar to Aleppo Domari is the ongoing grammaticalisation of the noun xor “heart” from a relational noun expressing location to a Layer II marker. Aleppo Domari has remained rather modest as far borrowing of prepositions is concerned. None of the core prepositions of Arabic made their way into the grammar of the language, and only the core Iranian preposition z- “from” was replicated. This preposition appears to be an old borrowing and must be well entrenched into the language as the morpheme already appears in sources from the 19th century. As far as the verb phrase is concerned, a peculiarity most probably shared by all northern varieties, is the extension - şt- to derive stems denoting progressive aspect. Another interesting morpheme is the future marker ƙa which evolved from a pseudo-verb of volition ƙər-. It was suggested that Domari ƙa and Balkan Romani ka most probably result from separate developments. Aleppo Domari is also conservative as far as complex verbs are concerned as there are almost no signs of integration.
between the lexical element and the light verb, contrary to other varieties in which integration is much more developed. As far as syntactic typology is concerned, Aleppo Domari displays a rather conservative pattern, having preserved to a certain extent the modifier-head order. One exception to this is the incipient convergence towards Arabic constituent order in noun-adjective constructions. Constituent order at clausal level seems to be quite free in Aleppo Domari. A detailed analysis is beyond the scope of this study but one example may illustrate the freedom exhibited in constituent order:

(44) čag-an har dis səknare əhar-fə ustāz
child-ACC.PL each day teach.IMPFV.3SG letter-INDEF teacher

“As every day, the teacher teaches a new letter to the kids”

As far as other grammatical borrowings are concerned, the numerals are inherited or borrowed from Kurdish. The only Arabic element that surfaces is in the expression of “ninety”: ʂadd illa dazz, literally “hundred (Kurdish) except (Arabic) ten (inherited)”. Amongst the modal verbs and auxiliary, only lāzīm “must” was borrowed from Arabic. Arabic inflections and negator are not replicated. Comparative and superlative initially draw on Kurdish and Turkish, and only marginally on Arabic. Focus particles do not draw on Arabic (šī “and, also”, ǧēna “also”), neither do indefinites. Categories largely replicated from Arabic are conjunctions, the complementiser inno, the relativiser illé, discourse markers (ba’dēn “afterwards”, ya’ni “that is to say” awwal šī “first of all”, xalās “that’s it”) while phasal adverbs are not Arabic (na-mānde “no more”, hazzi “yet”, although Arabic lissa “still, yet” was recorded). The syntactic typology remains quite free of any Arabic influence. The overall picture is that, while influenced by Arabic in several areas, Kurdish and other varieties of Iranian also had a sizeable impact. It should also be added that the influence of Kurdish may still be ongoing as many Dōm in Aleppo maintain a good level of proficiency in Kurdish, as they share their neighbourhood with Kurds.
